Preamble

To meet the challenge of ensuring excellence and NEP 2020 policy in engineering education, the issue of quality needs to be addressed, debated, and taken forward systematically. Accreditation is the principal means of quality assurance in higher education. The major emphasis of the accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of the University of Mumbai has taken the lead in incorporating the philosophy of NEP 2020 education in the process of curriculum development.

The First Year Engineering course is a broad foundation training program to impart scientific and logical thinking Training to learners in general with a choice of course selection in the Basic sciences and Engineering Sciences. Simultaneously NEP- 2020 objectives demand nurturing the basic skills required for familiarizing within the respective chosen Branch of Engineering by the learner. Keeping this in view, a pool of courses is offered in Basic sciences covering fundamentals required to understand modern engineering practices and emerging trends in technology. Considering the change in pedagogy and the convenience of the stress-free learning process, in the course work under heads of Engineering Sciences, a choice-based subject pool is offered in the second semester. Essentially to give a glimpse of trends in the industry under vocational skill practices, the pool is offered to nurture and develop creative skills in contemporary industrial practices. Criteria met in the structure is the opportunity for learners to choose the course of their interest in all disciplines.

Basic sciences cover Applied Physics and Elective Physics, Applied Chemistry and Elective Chemistry, and Applied Mathematics where a pool of subjects are given for selection, the rationale for the same is that generalized basic science courses are not feasible from learners' point of view. Considering the present scenario, diverse choices need to be made available to fulfill the expectation of a learner to aspire for a career in the field of current trends of Technology and interdisciplinary research. Ability enhancement can be achieved in Undergraduate training by giving an objective viewpoint to the learning process and transitioning a learner from a rote learner to a creative professional, for the purpose Design Thinking is introduced in the First Semester to orient a journey learner to become a skilled professional. Considering the NEP-2020 structure of award of Certificate & Diploma at multiple exit-point pools of Vocational skills is arranged for giving exposure to the current Industry practices.

Faculty resolved that course objectives and course outcomes are to be clearly defined for every course so that all faculty members in affiliated higher education institutes understand the depth and approach of the course to be taught, which will enhance the learner's learning process. NEP 2020 grading system enables a much-required shift in focus from teacher-centric to continuous-based learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. Credit assignment for courses is based on a 15-week teaching-learning process for NEP 2020, however, the content of courses is to be taught in 12-13 weeks and the remaining 2-3 weeks are to be utilized for revision, tutorial, guest lectures, coverage of content beyond the syllabus, etc.

There was a concern that in the present system, the first-year syllabus must not be heavily loaded to the learner and it is of utmost importance that the learner entering into the first year of an engineering course should feel at ease by lowering the burden of syllabus and credits. This is necessary for a learner to get accustomed to the new environment of a college and to create a bond between the teacher and the learner. The present curriculum will be implemented for the First Year of Engineering from the academic year 2024-25. Subsequently, this system will be carried forward for Second Year Engineering in the academic year 2025-26, and for Third Year and Final Year Engineering in the academic years 2026-27, and 2027-28, respectively.

Course Objectives: The course is aimed

1. To develop the basic Mathematical skills of engineering students that are imperative for effective understanding of engineering subjects. The topics introduced will serve as basic tools for specialized studies in many fields of engineering and technology.
2. To provide hands-on experience using SCILAB software to handle applications to real-life problems.

Course Outcomes: Students will be able to

1. Apply the basic concepts of Complex Numbers and will be able to use them to analyze for engineering problems.
2. Apply hyperbolic functions and logarithms in subjects like electrical circuits and electromagnetic wave theory for cutting-edge tools and technology.
3. Apply the basic concepts of partial differentiation of function of several variables and will be able to use in subjects like Electromagnetic Theory, Heat and Mass Transfer, etc.
4. Apply the concept of Maxima, Minima, and Successive differentiation and will be able to use it for optimization and tuning the systems in emerging and computing areas.
5. Apply the concept of Matrices and be able to use it for solving the KVL and KCL in electrical networks in emerging and telecommunications areas.
6. Apply the concept of Numerical Methods for solving engineering problems with help of SCILAB software.

Module	Detailed Contents	Hrs.	CO Mapping
01	Complex Numbers Pre-requisite: Review of Complex Numbers-Algebra of Complex Numbers, Cartesian, polar and exponential form of complex number, Statement of D'Moivre's Theorem. 1.1. Expansion of $\sin^n \theta$, $\cos^n \theta$ in terms of sines and cosines of multiples of θ and Expansion of $\sin n\theta$, $\cos n\theta$ in powers of $\sin \theta$, $\cos \theta$. 1.2. Powers and Roots of a complex number. # Self-learning topic: Basic of Complex Number.	2 2	CO1
02	Hyperbolic Functions & Logarithms of Complex Numbers 2.1. Circular functions of complex number and Hyperbolic functions. Inverse Circular and Inverse Hyperbolic Functions. Separation of real and imaginary parts of all types of Functions. (Simple Examples) 2.2. Logarithm of Complex Number (Simple Examples) # Self-learning topic: Applications of complex numbers in Electrical circuits.	3 1	CO2
03	Partial Differentiation 3.1. Partial Differentiation: Function of two and three variables, Partial derivatives of first and higher order. Differentiation of composite function. 3.2. Euler's Theorem on Homogeneous functions with two independent variables (with proof). Deductions from Euler's Theorem. (without proof). # Self-learning topics: Total differentials, implicit functions,	3 2	CO3

	Euler's Theorem on Homogeneous functions with three independent variables.		
04	Applications of Partial Differentiation and Successive Differentiation. 4.1. Maxima and Minima of a function of two independent variables, 4.2. Successive differentiation: nth derivative of standard functions. Leibnitz's Theorem (without proof) and simple examples. # Self-learning topics: Jacobian's of two and three independent variables (simple problems) Lagrange's Multiplier method.	1 3	CO4
05	Matrices Pre-requisite: Inverse of a matrix, addition, multiplication, and transpose of a matrix, symmetric, skew-symmetric Matrix (Only Definition). 5.1. Types of Matrices (Hermitian, Skew Hermitian, Unitary, Orthogonal Matrices and properties of Matrices (without proof)). The rank of a Matrix using Echelon form, reduction to normal form, and PAQ form (Only 3X3 Matrix) 5.2. System of homogeneous and non –non-homogeneous equations, their consistency, and solutions. # Self-learning topics: Application of inverse of a matrix to coding theory. Reduction to normal form and PAQ form. (m x n Matrix)	3 2	CO5
06	Numerical Solutions of Transcendental Equations and System of Linear Equations and Expansion of Function. 6.1. Solution of Transcendental Equations: Solution by Newton Raphson method and Regula –Falsi method. 6.2. Solution of a system of linear algebraic equations, by (1) Gauss Jacobi Iteration Method, (2) Gauss Seidel Iteration Method. # Self-learning topics: Indeterminate forms, L- Hospital Rule, Gauss Elimination Method, Gauss Jordan Method.	2 2	CO6

Term Work:

General Instructions:

1. Batch-wise tutorials are to be conducted. The number of students per batch should be as per University pattern for practicals.
2. Students must be encouraged to write SCILAB Programs in tutorial class only. Each Student has to write at least 2 SCILAB tutorials (including print out) and at least 6 class tutorials on entire syllabus.
3. SCILAB Tutorials will be based on (i) Gauss Jacobi Iteration Method (ii) Gauss Seidal Iteration method (iii) Newton Raphson Method (iv) Regula – Falsi method.

The distribution of Term Work marks will be as follows –

1.	Attendance (Theory and Tutorial)	05 marks
2.	Class Tutorials on entire syllabus	10 marks
3.	SCILAB Tutorials	10 marks

Assessment:

Internal Assessment Test (IAT) for 20 marks each:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

End Semester Theory Examination:

➤ Question paper format

- Question Paper will comprise a total of **six questions each carrying 15 marks Q.1** will be **compulsory** and should **cover the maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered

Rationale:

Most of the engineering branches are being off-spring of basic sciences where physics is playing a pivotal role in concept and understanding of foundation of core engineering branches. This syllabus is developed by keeping in mind, needs of all branches that we offer in University of Mumbai. In the distribution of modules, core physics and its applied form are given priority. Further, it is ensured that these modules will cover prerequisites needed for engineering courses to be introduced in higher semesters as core subjects or as interdisciplinary subjects in respective branches.

Course Objectives:

1. To provide students with a basic understanding of laser operation.
2. To explain the basic working principle of Optical fiber and its use in communication technology.
3. To demonstrate principles of interference in thin film.
4. To describe Maxwell's equations and their significance.
5. To build a foundation of quantum mechanics needed for modern technology.
6. To give exposure to the concept of Fermi level in semiconductors.

Course Outcomes:

1. Learners will be able to ILLUSTRATE the use of laser in LiDAR and Barcode reading.
2. Learners will be able to APPLY the foundation of fiber optics in the development of modern communication technology
3. Learners will be able to determinethe wavelength of light and refractive index of liquid using the interference phenomenon.
4. Learners will be able to ARTICULATE the significance of Maxwell's equations.
5. Learners will be able to RELATE the foundations of quantum mechanics with the development of modern technology.
6. Learner will be able to CLASSIFY semiconductors and EXPLAIN variation of Fermi level with temperature and doping concentration.

DETAILED SYLLABUS:

	Name of Module	Detailed Content	Hours	CO Mapping
	Prerequisite	Basic knowledge of optics and atomic structure, Wavefront and Huygens principle, reflection and refraction, Interference by division of wavefront, Refractive index of a material, Snell's law, Basics of vector algebra, partial differentiation concepts, Dual nature of radiation, Photoelectric effect, Matter waves, Davisson-Germer experiment. Intrinsic and extrinsic semiconductors, electrical resistivity and conductivity concepts	--	--
I	Lasers	Lasers: Spontaneous and stimulated emission, population inversion, pumping, active medium & active center, resonant cavity, coherence length and coherence time, Characteristics of lasers, He-Ne laser: construction and working. Fiber laser Construction and working	04	CO1

		Application : (i)Elementary knowledge of LiDAR(ii) Barcode reader (iii) Application of laser in metal work		
II	Fibre Optics	Optical fibers: Critical angle, acceptance angle, acceptance cone, numerical aperture, total internal reflection and propagation of light, Types of optical fibers: Single mode & multimode, step index & graded index, attenuation,attenuation coefficient, factors affecting attenuation, Fibre Optic Communication System, Advantages of optical fiber communication, numerical	04	CO2
III	Interference In Thin Films	Interference in thin film of uniform thickness, conditions of maxima and minima for reflected system, Conditions for maxima and minima for wedge shaped film (qualitative), engineering applications – (i) Newton's rings for determination of unknown monochromatic wavelength and refractive Index of transparent liquid (ii) AntiReflecting Coating	04	CO3
IV	Electrodynamics	Vector Calculus : Gradient, Divergence, Curl. Gauss's law, Amperes' circuital Law, Faraday's law, Divergence theorem , Stokes theorem Maxwell's equations in point form, Integral form and their significance(Cartesian coordinate only)	04	CO4
V	Quantum Physics	de Broglie hypothesis of matter waves, de Broglie wavelength for electron, Properties of matter waves, Wave function and probability density, mathematical conditions for wave function, problems on de Broglie wavelength, Need and significance of Schrödinger's equations, Schrödinger's time independent and time dependent equations, Energy of a particle enclosed in a rigidbox and related	06	CO5

		numerical problems, Quantum mechanical tunneling, Principles of quantum computing: concept of Qubit.		
VI	Basics Of Semiconductor Physics	Direct and Indirect Band Gap Semiconductors, Electrical Conductivity of Semiconductors, Drift Velocity, Mobility and Conductivity in Conductors Fermi- Dirac distribution function, Position of Fermi Level in Intrinsic and Extrinsic Semiconductors.	04	CO6

Assessment:

Internal Assessment Test (IAT) for 15 marks each:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

**End Semester Theory Examination:
Question paper format**

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
BSL101	Applied Physics Lab	--	1	-	--	0.5	-	0.5

- Question Paper will comprise a total of **five questions each carrying 15 marks** Q.1 will be **compulsory** and should **cover the maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **three questions** need to be answered

Course Code	Course Name	Theory					Term work	Pract / Oral	Total
		Internal Assessment Test (IAT)			End Sem Exam	Exam Duration (in Hrs)			
		IAT-I	IAT-II	IAT-I + IAT-II (Total)					
BSL101	Applied Physics Lab	--	--	--	--	--	25	--	25

Lab Objectives:

1. To develop scientific understanding of the physics concepts.
2. To develop the ability to explain the processes and applications related to science subjects.
3. To apply skills and knowledge in real life situations.
4. To improve the knowledge about the theory concepts of Physics learned in the class.
5. To improve ability to analyse experimental result and write laboratory report.
6. To develop understanding about inferring and predicting.

Lab Outcomes: Learners will be able to..

1. Determine wavelength / divergence of laser beam.
2. Determine parameters like numerical aperture / power attenuation of an optical fibre.
3. Perform experiments based on interference in thin film and determine radius of curvature of lens / diameter of wire / thickness of paper.
4. Calculate basic parameters / constants using semiconductors.
5. Determine energy gap / resistivity of a semiconductor.
6. Learner to understand the concept for virtual lab as per syllabus.

List of Experiments. (Minimum five experiments required)

Sr No	List of Experiments	Hrs	LO Mapping
01	Determination of wavelength using Diffraction grating. (Laser source)	01	LO1
02	Study of divergence of laser beam	01	LO1
03	Determination of Numerical Aperture of an optical fibre.	01	LO2
04	Measuring optical power attenuation in your plastic optical fiber	01	LO2
05	Determination of radius of curvature of a lens using Newton's ring set up.	01	LO3
06	Determination of diameter of wire/hair or thickness of paper using Wedge shape film method.	01	LO3
07	Determination of 'h' ..photo cell	01	LO4
08	Determination of 'h' using LED	01	LO4
09	Determination of energy band gap of semiconductor.	01	LO5
10	Determination of resistivity by four probe method.	01	LO5
11	Any other experiment based on syllabus may be included, which would help the learner to understand concept. Virtual lab may be developed and used for performing the experiments , after defining a suitable LO	01	LO6

Term Work Marks: 25 Marks (Total marks) = 10 Marks (Experiment) + 10 Marks Project + 5 Marks (Attendance)

Project work will be extended to semester-2 as well. In semester 1, a group of four students will be formed; a domain may be provided by faculty, the group will frame a problem statement in consultation with faculty. A PPT presentation with problem statement, preliminary literature survey, execution plan and a probable outcome is to be considered for awarding marks. Proper rubrics must be framed by faculty member

BSC103	Applied Chemistry	15	15	30	45	02	--	--	75

Rationale:

Chemical science has contributed in many ways to most of the Engineering branches where “Environmental Chemistry” is the modern approach to learn impact of Technology on habitat and can be common to all Core Groups, “Engineering Materials” can be prerequisites to many subjects of all core groups and Impact of corrosion on metals as engineering materials is the important area of concern. “Conventional and Non Conventional Energy Study” is the matter of general approach to all Core groups as Energy issue is the most recent concern even for designing computational engines (Include hardware & software energy efficient).

Course Objectives:

- 1) To study Coal as a conventional source of energy.
- 2) To study the effect of corrosion by different mechanisms on metals and methods of corrosion control.

- 3) To recognise importance of alloys and can apply the phase rule on it to study the effect of temperature and composition.
- 4) To introduce important properties of polymers as Engineering material.
- 5) To recognise the composition, properties and functions of various composite materials.
- 6) To study importance of Green Chemistry by comparative study of conventional and Green routes of syntheses, solvents and fuels.

Course Outcomes: Student will be able to -

- 1) Determine the quality of coal and quantify the oxygen required for combustion of coal.
- 2) Apply different methods to minimize corrosion in industries.
- 3) Interpret various phase transformations of alloy using thermodynamics.
- 4) Use the polymers for specific engineering applications on the basis of the properties.
- 5) Identify different types of composite materials for engineering applications.
- 6) Apply the principles of Green chemistry and study environmental impact for sustainable development

Prerequisite:

- 1) Knowledge about basic difference in Conventional and non-conventional energy sources.
- 2) Knowledge about concepts of Electrochemistry.
- 3) Knowledge of basic properties of metals and nonmetals.
- 4) Knowledge of 12 principles of Green Chemistry

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
I	Fuels and Combustion	A) cFuel: - Definition, Characteristics of good fuel. B) Calorific value (Definition, Types, Determination, Dulong's formula, Numerical) C) Coal: - Analysis of coal – Proximate analysis, Ultimate analysis, Numerical) D) Combustion of coal – Numerical	04	CO1
II	Corrosion	A) Introduction: - Definition, Types of Corrosion – i) Dry or Atmospheric Corrosion, ii) Wet or Electrochemical corrosion (In Acidic medium, In Neutral medium) B) Factors affecting rate of corrosion:-i) Position of metal in galvanic series, ii) Purity of Metal, iii) Nature of Corrosion product, iv) Temperature, v) pH of medium, vi) concentration of medium, vii) moisture, viii) Relative Cathodic and Anodic area, ix) overvoltage C) Methods to control corrosion: - i) Selection of metal, ii) Proper Designing, iii) Cathodic protection, iv) Use of Corrosion Inhibitors, v) Metallic Coating D) Corrosion in Electronic devices	04	CO2
III	Alloys	A) Purpose of making alloys. B) i) Gibbs Phase rule – Statement, Terms involved	04	CO3

		<p>with examples.</p> <p>ii) Reduced phase rule, Two-component system (Pb-Ag) & Numerical.</p> <p>iii) Merits and Limitations of Phase rule.</p>		
IV	Introduction to Polymers	<p>A) Macro-molecular science, basic concept of polymers, Chemical bonding in polymers, Classification of Polymers.</p> <p>B) Properties of Polymers:- i) Molecular weight - Number average molecular weight, Weight average molecular weight, Numerical, ii) Crystallinity - Crystalline and amorphous polymers – Glass transition temperature, iii) Mechanical Properties: Hardness, tensile strength, creep, fatigue, impact resistance (introduction), iv) Electrical properties: dielectric strength, insulation resistance, surface resistivity (Introduction), v) Optical properties: refractive index, transmittance, photoelectric property, colour</p>	05	CO4
V	Introduction to Composites	<p>A) Definition, Characteristics of Composites,</p> <p>B) Constituents of Composites – Matrix Phase and Dispersed Phase (Definition and Functions)</p> <p>C) Classification of Composites</p>	04	CO5
VI	Green Chemistry for sustainable development	<p>A) Comparative study of synthesis of following industrially important molecules by conventional and green route:-i) Indigo dye, ii) Adipic acid, iii) Carbaryl</p> <p>B) Green Solvents: - characteristics and applications of Supercritical solvents and ionic liquids</p> <p>C) Green Fuels:- Synthesis and Advantages of i) Biodiesel, ii) Ethanol</p>	05	CO6

Recommended Books:

BSL102	Applied Chemistry Lab	--	--	--	--	--	25	--	25

Lab Objectives:

1. To apply knowledge acquired during the theory class in carrying out the experiments for qualitative and quantitative determination.
2. To analyse experimental results and write laboratory report.

Lab Outcomes: After completion of experiment, the learners will be able to:

1. Understand the significance of proximate analysis of coal and determine quality of coal sample.
2. Learn various quantitative analytical techniques to determine % of elements from alloy samples.
3. Synthesize biodiesel at laboratory level and calculate % atom economy from Green chemistry point of view.
4. Learn the effect of various factors on the rate of corrosion.
5. Synthesize bioplastic at laboratory level using from Green chemistry.
6. Quantitative determination of N₂ / Flue gas.

Prerequisite:

1. Knowledge of basic safety practices in the Chemistry Laboratory
2. Knowledge of Proximate analysis of coal
3. Knowledge of volumetric analysis

List of Experiments.

Sr No	List of Experiments	Hrs	LO Mapping
01	Determination of moisture content of coal	01	LO1
02	Determination of ash content of coal	01	LO1
03	Determination of Zn in Brass	01	LO2
04	Synthesis of Biodiesel from vegetable oil	02	LO3
05	Determination of Cu in Brass	01	LO2
06	Flue gas analysis by Orsats Apparatus	02	LO6
07	Synthesis of biodegradable plastics	02	LO5
08	Determination of nitrogen by Kjeldahl's method	02	LO6
09	To compare rate of corrosion of various metals in acidic medium	01	LO4

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
ESC101	Engineering Mechanics	02	-	-	02	-	-	02

Rationale:

Engineering mechanics is a branch of science that deals with the behavior of solid bodies when subjected to external forces or loads and the effects of these forces on the bodies. It is a fundamental discipline within engineering and provides the basis for understanding and analyzing various types of structures and mechanisms.

Course Objectives:

1. To acquaint with basic principles of centroid and its application
2. To familiarize with the concepts of force, moment, Resultant and Equilibrium of system of coplanar force.
3. To acquaint with the basic concept of friction and its application in real-life problems.
4. To understand the parameters required to quantify the Kinematics of Particle and Rigid body.
5. To understand the parameters required to quantify the Kinetics of rigid body.
6. To acquaint with the basics of Robot kinematics

Course Outcomes:

1. Determine the equivalent force-couple system for a given system of forces.(L3)
2. Demonstrate the understanding of Centroid and its significance and locate the same. (L3)
3. Illustrate the concept of force, moment and apply the same along with the concept of equilibrium in two- and three-dimensional systems with the help of FBD. (L3)
4. Calculate position, velocity and acceleration etc. of particle/rigid body using principles of kinematics (L3)
5. Analyze particles in motion using force and acceleration, work-energy and impulse- momentum principles (L4)
6. Establish the relation between robot joints and parameters (L2)

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Resolution of a force. Use of trigonometry functions. Parallelogram law of forces. Law of triangle. Polygon	01	CO1

		<p>law of forces, Lami's theorem. Concepts of Vector Algebra.</p> <p>Uniformly accelerated motion along a straight line, motion under gravity, projectile motion, Time of flight, Horizontal range, Maximum height of a projectile.</p> <p>Law of conservation of Energy, Law of conservation of Momentum, and Collision of Elastic Bodies. Work-Energy Principle</p> <p>(Note: There will be no questions from the prerequisite in the theory examination)</p>		
I	System of Forces	<p>Classification of force systems, Principle of transmissibility, composition and resolution of forces. Resultant of coplanar force system (Concurrent forces, parallel forces and general system of forces). Moment of force about a point, Couples, Varignon's Theorem. Resultant of Non-Coplanar (Space Force): Concurrent force system</p>	04	CO1
II	Centroid	Centroids of plane laminas: Plane lamina consisting of primitive geometrical shapes.	03	CO2
III	Equilibrium of Force system and Friction	<p>3.1Equilibrium: Conditions of equilibrium for concurrent forces, parallel forces and general forces, Couples. Equilibrium of rigid bodies, free body diagrams.</p> <p>3.2Equilibrium of Beams: Types of beams, simple and compound beams, type of supports and reaction: Determination of reactions at supports for various types of loads on beams. (Excluding problems on internal hinges)</p> <p>3.3 Friction: Laws of friction. Cone of friction. angle of repose, angle of friction, equilibrium of bodies on a horizontal and inclined plane.</p>	06	CO3
IV	Kinematics of particle and rigid bodies	<p>4.1 Motion of particle with variable acceleration. Motion along plane curved path. velocity and acceleration in terms of rectangular components, tangential and normal component of acceleration.</p> <p>4.2 Introduction to general plane motion, problem based on Instantaneous center (ICR) method for general plane motion (up to 2 linkage mechanism and no relative velocity method)</p>	05	CO4
V	Kinetics of particle	<p>5.1 Force and Acceleration: -Introduction to basic concepts, D'Alembert's Principle, concept of Inertia force, Equations of dynamic equilibrium.</p> <p>5.2 Principle of linear impulse and momentum. Impact and collision: Law of conservation of momentum, Coefficient of Restitution. Direct Central Impact and Oblique Central Impact. Loss of Kinetic Energy in collision of inelastic bodies.</p>	05	CO5

VI	Introduction to Robot Kinematics	Fundamental of Robot Mechanics, Degree of Freedom, D-H Parameters, robot kinematics (Forward), Homogeneous transformation (limited to 2 DOF Serial robot)	02	CO6
-----------	---	---	-----------	------------

		IAT-I	IAT-II	IAT-I + IAT-II (Total)	Exam	(in Hrs)			
ESC102	Basic Electrical and Electronics Engineering	20	20	40	60	2	-	-	100

Course Objectives:

1. To provide knowledge on fundamentals of DC circuits
2. To provide knowledge of single phase and three phase AC circuits.
3. To inculcate fundamental knowledge of 1- Φ transformer.
4. To provide basic knowledge on fundamentals of DC and AC machines.
5. To provide knowledge of special purpose Diodes.
6. To provide knowledge of Transistor.

Course Outcomes:

- 1) Apply various network theorems to determine the circuit response / behavior.
- 2) Evaluate and analyze 1- Φ and 3- Φ AC circuits.
- 3) Understand the construction, operation and applications of 1- Φ transformers.
- 4) Illustrate the working principle of 3- Φ , 1- Φ Induction motors and DC Motors.
- 5) Study the construction, operation and applications of some special purpose Diodes.
- 6) Study construction, operation and applications of some Transistors.

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	Resistance, inductance, capacitance, series and parallel connections of resistance, concepts of voltage, current, power and energy and its units. Magnetic circuits, MMF, Magnetic field strength, reluctance.		
I	01	DC Circuits: (Only independent sources) Kirchhoff's Laws, Ideal and Practical Voltage and Current Sources, Source Transformation, Mesh and Nodal Analysis (no super node and super mesh) Star-Delta / Delta-Star Transformations, Superposition Theorem, Thevenin's Theorem, Norton's Theorem and Maximum Power Transfer Theorem.	10	CO1
II	02	AC Circuits: Generation of alternating voltage, basic definitions, average and RMS values, phasor and phase difference, sums on phasors, Single-phase ac series and parallel circuits consisting of R, L, C, RL, RC, RLC combinations, definitions - real, reactive and apparent power, admittance (Y), Series and parallel resonance (only theory). Generation of Three-Phase Voltages, voltage & current relationships in Star and Delta Connections.	12	CO2

III	03	Single Phase Transformer: (Numerical are not expected) Working principle of single-phase transformer, types of single- phase transformer, transformation ratio, actual (practical) and ideal transformer, Transformer losses, efficiency, applications of transformer.	04	CO3
IV	04	Electrical Machines: (Numerical are not expected) principle of operation, constructional details, classification and applications of DC Motor, three-phase induction motor, Single-Phase induction motors and BLDC motor	05	CO4
V	05	Special Purpose Diodes: (Numerical are not expected) Characteristics and operation of Zener Diode and application as a voltage regulator. Basic and structure of LED. Application of LED in indicative and lighting displays.	04	CO5
VI	06	Introduction to Transistors: (Numerical are not expected) structure and operation of BJT. BJT configurations (only common emitter). FET structure and operation. Application of BJT and FET in amplification, switching and oscillators.	04	CO6

Lab Objectives:

1. To impart the basic concept of network analysis and its application.
2. To provide the basic concept of AC circuit analysis and its application.
3. To illustrate the operation of the transformer.
4. To illustrate the operation of machines.
5. To explain the Zener diode voltage regulation characteristic.
6. To explain the BJT and FET as switches and amplifiers.

Lab Outcomes:

- 1) Interpret and analyze the behavior of DC circuits using network theorems.
- 2) Perform and infer experiments on single-phase and three-phase AC circuits

- 3) Illustrate the performance of a single-phase transformer
- 4) Illustrate the performance of A.C. machine and DC Motor
- 5) Perform an experiment on voltage regulation characteristics of Special diode
- 6) Perform an experiment on the VI characteristic Transistor.

List of Experiments.

Sr No	List of Experiments	Hrs	LO Mapping
01	Basic safety precautions. Introduction and use of measuring instruments - voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors, and inductors	01	LO1
02	To measure output voltage across load resistor/current through load resistor and verify the result using Mesh and Nodal analysis	01	LO1
03	Verification of Superposition Theorem.	02	LO1
04	Verification Thevenin's and Norton's theorem	02	LO1
05	Verification Maximum Power Transfer Theorem.	02	LO1
06	To find the resistance and inductance of a coil connected in series with a pure resistance using the voltmeter method	02	LO2
07	To measure the relationship between phase and line, currents and voltages in three-phase system (star & delta)	02	LO2
08	To demonstrate cut-out sections of the single-phase transformer.	02	LO3
09	To demonstrate cut-out sections of the DC machine	02	LO4
10	To plot Zener diode voltage regulation characteristics	02	LO5
11	To demonstrate the application of LED in indicative and lighting display	02	LO5
12	To demonstrate the application of BJT as a switch	02	LO5
13	To demonstrate BJT/FET as an amplifier	02	LO6

Sr No	List of Assignments / Tutorials	Hrs	LO Mapping
01	Assignment on Basic electrical safety practices	02	LO1
02	Numerical assignment on Mesh analysis and nodal analysis		LO1
03	Numerical assignment on Thevenin, Norton, and maximum power transfer theorem		LO1
04	Numerical assignment on series and parallel circuits		LO2
05	Assignment on single-phase transformer		LO2
06	Assignment on DC and AC machine		LO4
07	Assignment on special purpose diodes		LO5
08	Assignment on BJT and FET		LO6

Assessment:

Term Work: Term Work shall consist of at least 08 to 10 practicals based on the above list. Also, Term work Journal must include at least 6 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

Rationale

This course has been designed to hone the communicative abilities of First Year Engineering students by providing them skill-based training on LSRW (Listening-Speaking-Reading-Writing) to

prepare them for a career in the industry and for competitive exams pertaining to higher studies.

Course Objectives - The learners should be able to:

1. Effectively evaluate the dynamics of communication and navigate professional arenas
2. Competently acquire active listening skills by comprehending various types of Speech Acts
3. Critically analyse communication barriers, audience and purpose to speak proficiently
4. Minutely comprehend extensive texts, technical and non-technical, to execute relevant tasks
5. Efficiently organize and create purposeful technical writing for professional transaction
6. Successfully manage teams, by applying ethical standards to deliver synergistic solutions

Course Outcomes - The learners will be able to:

1. Evaluate the dynamics of communication and effectively navigate professional arenas
2. Acquire active listening skills by comprehending various types of Speech Acts
3. Analyse different communication barriers, audience and purpose, and speak proficiently
4. Comprehend extensive texts, technical and non-technical, to execute relevant tasks
5. Organize and create purposeful technical writing for professional transactions
6. Manage teams successfully, by applying ethical standards to deliver synergistic solutions

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
01	Module 1- Fundamentals of Communication	<p>1.1. Basic Concepts of Communication</p> <ul style="list-style-type: none"> • Definition, Objectives, Postulates <p>1.2. Process of Communication</p> <ul style="list-style-type: none"> • Stimulus, Sender, Encoding, Message, Medium, Channel, Receiver, Decoding, Feedback <p>1.3. Methods of Communication</p> <ul style="list-style-type: none"> • Verbal (<i>Written & Spoken</i>). • Non-verbal cues perceived through the five senses (<i>Visual, Auditory, Tactile, Olfactory, Gustatory</i>) • Non-verbal cues transmitted cues through (<i>The body, Voice, Space, Time, Silence</i>) <p>1.4. Barriers to Communication</p> <ul style="list-style-type: none"> • Mechanical, Physical, Semantic & Linguistic, Psychological, Socio-cultural <p>1.5. Organisational Communication</p> <ul style="list-style-type: none"> • Formal (<i>Upward, Downward, Horizontal</i>). • Informal (<i>Grapevine</i>) 	08	CO1

02	Module 2 - Developing Basic Listening Skills	2.1. Concepts of Active Listening <ul style="list-style-type: none"> • Listening for Details • Listening for Gist • Listening for Inference <i>(For details please refer to Lab. Syllabus)</i> 2.2. Enhancing Listening Proficiency Using Language Labs or on Open Source Platforms	02	CO2
03	Module 3 - Developing Basic Speaking Skills	3.1. Conversational Activities - Monologues <ul style="list-style-type: none"> • Introducing yourself, Introducing others, One-minute impromptu speeches, Scaffolded story telling 3.2. Conversational Activities - Dialogues <ul style="list-style-type: none"> • Role plays on everyday interactions, Interviews (Find out if...), Information Gap Activities, Picture descriptions and feedback, Situational conversations. 3.3. Conversational Activities - Pronunciation, Stress & Rhythm, Intonation <ul style="list-style-type: none"> • Neutralisation of accent, Word stress, Rhythm & Pauses, Tonal variations/inflections <i>(For details please refer to Lab. Syllabus)</i>	02	CO3

04	Module 4 - Developing Basic Reading Skills	<p>4.1. Verbal Aptitude</p> <ul style="list-style-type: none"> Root Words, Meanings, Word Forms, Synonyms, Antonyms, Collocations, Prefixes, Suffixes at a similar difficulty level of entrance tests like CAT/GRE/GMAT & proficiency tests like TOEFL/IELTS <p>4.2. Grammar</p> <ul style="list-style-type: none"> Identifying Common Errors (<i>Subject-verb agreement, Articles. Prepositions, Misplaced modifiers and Punctuations</i>) Redundancies, Idioms, Cliches at a similar difficulty level of entrance tests like CAT/GRE/GMAT & proficiency tests like TOEFL/IELTS <p>4.3. Techniques to Improve Reading Fluency and Comprehension</p> <ul style="list-style-type: none"> Intensive Reading Extensive Reading Skimming Scanning SQ5R Method (<i>Survey, Question, Reading, Recording, Recall, Review and Revise</i>) <p>4.4. Reading & Summarisation Skills</p> <ul style="list-style-type: none"> Summarising text to Graphic Organisers (GO) and visa-versa. Venn diagrams, Radial Diagrams (<i>Mindmaps</i>), Tree Diagrams, Cyclic Diagrams, Flow Charts, Timelines, Matrix (<i>Tables</i>), Pyramids Summarising text in point form Summarising text in one-sentence central idea 	02	CO4
05	Module 5 - Developing Basic Writing Skills	<p>5.1. Coherence & Cohesion in Writing</p> <ul style="list-style-type: none"> Basic Units of Writing (<i>Words, Sentences, Paragraphs</i>) Coherence (<i>Structure of written pieces, CSI Order of Organisation</i>) Cohesive Devices (<i>Referencing, Repetition, Substitution, Ellipsis, Transition Signals</i>). Structure of a Paragraph (<i>Topic Sentence, Supporting Ideas, Concluding Sentence</i>). <p>5.2. Seven Cs of Business Writing</p> <ul style="list-style-type: none"> Completeness, Conciseness, Consideration, Concreteness, Clarity, 	09	CO5

		<p>Courtesy, Correctness.</p> <p>5.3. Format & Types of Formal Letters</p> <ul style="list-style-type: none"> • Parts of a Formal Letter in Complete Block Style • Request/Permission Letter • Claim and Adjustment Letter • Sales Letter • E-mails <p>5.4. Writing User Instructions</p> <ul style="list-style-type: none"> • Styles of Instruction Presentation (<i>Impersonal, Indirect, Direct, Imperative</i>) • Describing general function/purpose of an object/process, • Drawing labelled diagrams • Describing labelled parts • Writing User Instructions • Writing Special Notices (<i>Note, Caution, Warning, Danger</i>) <p>5.5. Content Creation for Social Media and e-Commerce Platforms</p> <ul style="list-style-type: none"> • Blogs • Poetry • Keynote speeches • Podcast titles • Landing pages • Social media posts • YouTube video description • Screenwriting/Script Writing <p><i>(Ensure minimum 3 of these categories are covered in the form of competitions)</i></p>		
06	Module 6 - Ethical and Managerial Skills for Engineers	<p>6.1.Team building</p> <ul style="list-style-type: none"> • Five stages of Team, (Forming, Storming, Norming, Performing and Adjourning) <p>6.2.Goal setting</p> <ul style="list-style-type: none"> • SMART goals – short term and long-term goals <p>6.3.Ethical Considerations for Professional Integrity</p> <ul style="list-style-type: none"> • Fairness and Honesty • Difference between Values and Ethics 	03	CO6

		<ul style="list-style-type: none"> • Ethical principles • Ethical use of AI Tools • Plagiarism and copyright infringement • Ethical-dilemma case studies

Assessment:

Internal Assessment Test (IAT) for 15 marks each:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

End Semester Theory Examination:

Question paper format

- Question Paper will comprise a total of **five questions each carrying 15 marks Q.1** will be **compulsory** and should **cover the maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **three questions** need to be answered.

Lab Objectives

1. To impart training to help the students develop engineering skill sets.
2. To inculcate respect for physical work and hard labor.
3. To get exposure to the interdisciplinary engineering domain.

Lab Outcomes: Learners will be able to...

1. Develop the necessary skill required to handle/used different fitting tools.
2. Develop skill required for hardware maintenance.

3. Able to install an operating system and system drives.
4. Able to identify the network components and perform basic networking and crimping.
5. Able to prepare the edges of jobs and do simple arc welding.
6. Develop the necessary skill required to handle/use different plumbing tools and simple job.

Sr. No.	Detailed Content	Hrs.	LO Mapping
	<p>Note: Trade 1 and 2 are compulsory. Select any ONE trade topics out of the topic at trade 3 to 5. Demonstrations and hands on experience to be provided during the periods allotted for the same. Report on the demonstration including suitable sketches is also to be included in the term work CO-1 is related to Trade-1 CO-2 to CO-4 is related to Trade-2 CO-5 is related to Trade-3 CO-6 is related to Trade-4 CO-7 is related to Trade-5 CO evaluation is to be done according to the opted Trades in addition to Compulsory Trades.</p>		
Trade-1	<p>Fitting (Compulsory):</p> <ul style="list-style-type: none"> • Use and setting of fitting tools for chipping, cutting, filing, marking, center punching, drilling, tapping. • Term work to include one job involving following operations: filing to size, one simple male-female joint, drilling and tapping 	04	LO1
Trade-2	<p>Hardware and Networking: (Compulsory)</p> <ul style="list-style-type: none"> • Dismantling of a Personal Computer (PC), Identification of Components of a PC such as power supply, motherboard, processor, hard disk, memory (RAM, ROM), CMOS battery, CD drive, monitor, keyboard, mouse, printer, scanner, pen drives, disk drives etc. Assembling of PC, Installation of Operating System (Any one) and Device drivers, Boot-up sequence. Installation of application software (at least one) Basic troubleshooting and maintenance Identification of network components: LAN card, wireless card, switch, hub, router, different types of network cables (straight cables, crossover cables, rollover cables) Basic networking and crimping. NOTE: Hands on experience to be given in a group of not more than four students 	06	LO2, LO3, LO4
Trade-3	<p>Welding:</p> <ul style="list-style-type: none"> • Edge preparation for welding jobs. Arc welding for different job like, Lap welding of two plates, butt welding of plates with simple cover, arc welding to join plates at right angles. 	06	LO5

Trade4	Plumbing: <ul style="list-style-type: none"> Use of plumbing tools, spanners, wrenches, threading dies, demonstration of preparation of a domestic line involving fixing of a water tap and use of coupling, elbow, tee, and union etc. 	04	LO6
Trade-5	Machine Shop: <ul style="list-style-type: none"> At least one turning job is to be demonstrated and a simple job to be made for Term Work in a group of 4 students. 	06	LO6

Term Work: Term Work shall consist of at least 3 Trade based on the above list. Also, Term work.

Term Work Marks: 25 Marks (Total marks) = 20 Marks (Workshop Experiment) + 5 Marks (Attendance)

Lab Objectives: This subject aims to provide students with an understanding of the role computation can play in solving problems. The Course will be taught using C-Programming Language.

1. Understand and use basic terminology in computer programming.

2. Use various data types in C programs effectively.
3. Design and implement programs involving decision structures, loops, and functions.
4. Design Implement Arrays , String, and Structure
5. Describe and utilize memory dynamics through the use of pointers.
6. Use different data structures and create/update basic data files in C.

Lab Outcomes: Learners will be able to

1. Illustrate the basic terminology used in computer programming.
2. Use different data types in a computer program.
3. Design programs involving decision structures, loops and functions.
4. Implement Arrays , String, and Structure
5. Describe the dynamics of memory by the use of pointers.
6. Use different data structures and create/update basic data files.

DETAILED SYLLABUS

Sr. No .	Module	Detailed Content	Hours	LO mapping
1	Fundamentals of C-Programming	1.1 Character Set, Identifiers and keywords, Data types, Constants, Variables. 1.2 Operators -Arithmetic, Relational and logical, Assignment, Unary, Conditional, Bitwise, Comma, other operators. Expression, statements, Library Functions, Preprocessor. 1.3 Data Input and Output – getchar(), putchar(), scanf(), printf(), gets(), puts(), Structure of C program .	06	LO1, LO2
2	Control Structures	2.1 Branching - If statement, If-else Statement, Multiway decision. 2.2 Looping – while, do-while, for 2.3 Nested control structure - Switch statement, Continue statement Break statement, Goto statement.	05	LO3

3	Functions and Parameter	3.1 Function -Introduction of Function, Function Main, defining a Function, accessing a Function, Function Prototype, Passing Arguments to a Function, Recursion. 3.2 Storage Classes –Auto , Extern , Static, Register	05	LO3
4	Arrays , String Structure	4.1 Array -Concepts, Declaration, Definition, Accessing array element, One-dimensional and Multidimensional array. 4.2 String - Basic of String, Array of String, Functions in String.h 4.3 Structure - Declaration, Initialization, structure within structure, Operation on structures, Array of Structure.	05	LO4
5	Pointer	5.1 Pointer: Introduction, Definition and uses of Pointers, Address Operator, Pointer Variables, Dereferencing Pointer, Void Pointer, Pointer Arithmetic, Pointers to Pointers, Pointers and Array.	03	LO5
6	Files	6.1 Files: File operation- Opening, Closing, Creating, Reading, Processing File.	02	LO6

02	a) Program to demonstrate Branching - If statement, If-else Statement, Multiway decision. b) Program to demonstrate Looping – while, do-while	02
03	a) Program to demonstrate Nested control structure- Switch statement, Continue statement, Break statement, Goto statement	02
04	a) Program to demonstrate Function, Passing Arguments to a Function (call by value and call by reference)	02
05	a) Implement an iterative function for factorial/ Fibonacci etc. b) Implement a recursive function for factorial/ Fibonacci etc.	02
06	a) Program to demonstrate Storage Classes –Auto, Extern, Static, Register	02
07	c) Program to demonstrate Array 1D, d) Program to demonstrate Array 2D	02
08	e) Program to demonstrate String f) Program to demonstrate String arrays of string	02
09	Program to demonstrate Structure Write a program to store and display information of a student/employee etc. using structures. a) Define a structure. b) Read and store details. c) Display the stored information.	02
10	Program to demonstrate pointers a) Define a node structure. b) Implement functions to insert, delete, and display nodes.	02

11	<p>Program to demonstrate files</p> <p>Write a program to maintain a simple student/employee etc. database using file handling.</p> <p>a) Open a file to store student records.</p> <p>b) Implement functions to add, update, and display records.</p> <p>c) Ensure data persistence by saving changes to the file.</p>	02
12	<p>Implement one small application using Function, Files, Structure and Pointers concepts you have learnt in C (eg. : Simple Library Management System</p> <p>1.Functions: Add, display, and search books. 2. Files: Store and retrieve book data. 3. Structures: Represent a book. 4. Pointers: Manage the list of books dynamically</p>	02

Sr No	List of Assignments / Tutorials	Hrs
01	Flowcharts for programs	02
02	Functions and Parameter	
03	Control Structures	
04	Functions and Parameter	
05	Arrays, String Structure and Union	
06	Pointer and Files	

Assessment :

Term Work: Term Work shall consist of at least 10 to 12 practicals' based on the above list. Also, Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
CC101	Induction cum Universal Human Values	2#	-	-	-	-	-	2

Course Code	Course Name	Theory					Term work	Pract / Oral	Total
		Internal Assessment Test (IAT)			End Sem Exam	Exam Duration (in Hrs)			
		IAT-I	IAT-II	IAT-I + IAT-II (Total)					
CC101	Induction cum Universal Human Values	--	--	--	--	--	--	--	--

Rationale:

“The purpose of the education system is to develop good human beings capable of rational thought and action, possessing compassion and empathy..., with sound ethical moorings and values. It aims

at producing engaged, productive, and contributing citizens for building an equitable, inclusive, and plural society as envisaged by our Constitution. Education must develop not only cognitive capacities... but also social, ethical, and emotional capacities and dispositions.... Education is fundamental for achieving full human potential, developing an equitable and just society, and promoting national development... A holistic and multidisciplinary education would aim to develop all capacities of human beings – intellectual, aesthetic, social, physical, emotional, and moral in an integrated manner” [NEP 2020, p 4].

UHV courses are intended to help students to develop a holistic, humane world vision. A self-reflective, explorational methodology is adopted. All content discussed is universal, rational, and verifiable, and leads to harmony.

Holistic education inculcates the following three aspects in the student:

1. **Holistic, Humane Vision of Life** – harmonious individual to cosmos
2. **Human Values**– human feelings, participation based on holistic vision
3. **Skills**– required to live with these values in mutual relationship at all levels of human existence

Course Objectives:

The objective of the course is :

1. Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
2. Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence
3. Strengthening of self-reflection.
4. Development of commitment and courage to act.
5. Prepare learner for achieving full human potential who can be contribute for developing an equitable and just society, and promoting national development
6. developing clarity of these fundamental universal human values to help the learner in understanding and living by the various specific expressions. E.g., National values enshrined in the Constitution, aspirations articulated in NEP 2020, UN MDGs and SDGs...

Course Outcomes: After completion of the course learner will be able to

1. Identify basic human aspirations and programme for its fulfilment.
2. Express existing reality of Human being
3. Explain the values in human-human relationship and program for its fulfilment to ensure mutual happiness.
4. Describe harmony in surroundings family and society.
5. Explain harmony nature, existence as coexistence and become more responsible in life, in handling problems with sustainable solutions.
6. Apply what they have learnt to their own self in day-to-day life and utilize the professional competence for augmenting universal human order, develop holistic technologies, management models and production systems.

Prerequisite: There is no prerequisite for this course.

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	No prerequisite		

I	Introduction - Need, Basic Guidelines, Content and Process for Value Education	Purpose and motivation for the course, Self-Exploration, Continuous Happiness and Prosperity- the basic Human Aspirations, Right understanding, Relationship and Physical Facility- the basic requirements for fulfilment of aspirations, Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario, Method to fulfil the above human aspirations.	05	CO1
II	Understanding Harmony in the Human Being	Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility. the Body as an instrument of 'I', characteristics and activities of 'I' and harmony in 'I', harmony of I with the Body: Self-regulation and Health; correct appraisal of Physical needs, meaning of Prosperity in detail, Programs to ensure Self-regulation and Health.	04	CO2
III	Understanding Harmony in the Family	Understanding values in human-human relationship and program for its fulfilment to ensure mutual happiness; Trust and Respect as the foundational values of relationship, the other salient values in relationship	07	CO3
IV	Understanding Harmony in the Society	Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals, Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.	03	CO4
V	Understanding Harmony in the Nature and Existence - Whole existence as Coexistence	Understanding the harmony in the Nature, Interconnectedness and mutual fulfilment among the four orders of nature, cyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all pervasive space, Holistic perception of harmony at all levels of existence.	04	CO5
VI	Implications of the Holistic Understanding of Harmony on Professional Ethics	Natural acceptance of human values, Definitiveness of Ethical Human Conduct, Basis for Humanistic Education, Humanistic Constitution and Humanistic. Universal Order, Competence in professional ethics: Ability to utilize the professional competence for augmenting universal human order and identify the scope and characteristics of people friendly and eco-friendly production systems. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic	03	CO6

		technologies, management models and production systems, Strategy for transition from the present state to Universal Human Order. Sum up.

Note:

1. This is an **audit course**.
2. This course is to be taught by faculty from every teaching department
3. Lecture hours are to be used for interactive discussion, placing the proposals about the topics at hand and motivating students to reflect, explore and verify them.
4. In the discussions, the mentor encourages the student to connect with one's own self and do self-observation, self-reflection and self-exploration
5. One or two periods from each module may be used for tutorials. These are important for the course. The difference is that the laboratory is everyday life, and practical are how you behave and work in real life.
6. Depending on the nature of topics, worksheets, home assignment and/or activity can be included. The practice sessions (tutorials) would also provide support to a student in performing actions commensurate to his/her beliefs. It is intended that this would lead to development of commitment, namely behaving and working based on basic human values.

Term Work:

General Instructions:

1. Batch wise tutorials are to be conducted. The number of students per batch should be as per University pattern for practical.
2. Students must be encouraged to write SCILAB Programs in tutorial class only. Each Student has to write at least 4 SCILAB tutorials (including print out) and at least 6 class tutorials on entire syllabus.
3. SCILAB Tutorials will be based on (i) Euler Method, (ii) Modified Euler Method, (iii) Runge-Kutta Method of fourth order, (iv) Trapezoidal Rule, (v) Simpson's $1/3^{\text{rd}}$ Rule
(vi) Simpson's $3/8^{\text{th}}$ rule

The distribution of Term Work marks will be as follows –

1.	Attendance (Theory and Tutorial)	: 05 marks
2.	Class Tutorials on entire syllabus	: 10 marks
3.	SCILAB Tutorials	: 10 marks

Assessment:

Internal Assessment (IA) for 20 marks each:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

End Semester Theory Examination:

➤ Question paper format

- Question Paper will comprise a total of **six questions each carrying 15 marks**. Q.1 will be **compulsory** and should **cover the maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered.

Rationale :

This course discusses basic aspects and working principles of frontier technologies which are in trend and in frontier research . Modules are designed to provide conceptual clarity of technologies of the 21st century ranging from Imaging to Energy Harvesting where AI and Data analytic are going to play an important role. Creative young minds have larger scope to explore in these areas with the skill sets they are going to acquire in having specific training in their selected Branch of engineering .

Course Objectives:

1. To demonstrate the use of Solar Power system and basic designing of solar power stations .
2. To explain basic working principle of Image sensors and their use and fundamentals of image processing.
3. To explain MEMS technology and sensor construction
4. To describe various types of fuel cell and its selection
5. To provide fundamentals of Energy harvesting
6. To discuss nanotechnology applications in Nano computing

Course Outcomes:

1. Learners will be able to MEASURE solar Power and CONSTRUCT basic solar power system .[BT 3]
2. Learners will be able to MEASURE Chromaticity and ILLUSTRATE colour matching concept..[BT3]
3. Learners will be able to ILLUSTRATE use of MEMS sensors {BT2]
4. Learners will be able to DESCRIBE various Fuel cells and its components [BT2]
5. Learner will be able to ASSIMILATE concept of Energy harvesting and its role in emerging innovative eco friendly applications. [BT2]
6. Learner will be able to EXPLAIN AI integration in various nanotechnology applications.[BT2]

DETAILED SYLLABUS:

	Name of Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	P-n- junction, working principle of optical fibre, Basics of sound, electric field, magnetic field, conductivity, mobility, Basics of Crystal Physics (Unit cell, Space lattice, Crystal systems), X-rays, Frequency ranges in electromagnetic spectrum, classification of sound, Electrostatic focusing, magneto-static focusing.		
I	solar Energy	Conversion of solar Energy in to Electricity ,PhotovoltaicEffect and Solar Cells working principle , Types of Solar Cells , Series & parallel solar cell connections . Applications of Solar system .	4	CO1
II	OPTICAL Imaging	Imaging sensors CCD , CMOS construction and working , Image formation .(Monochrome and Colour) Chromaticity diagram , Chromaticity coordinates, Colour Measurement &colour matching	4	CO2
III	Micro Electro - Mechanical Systems	Overview of MEMS , Intrinsic Characteristics of MEMS , Microsensors and microactuators , Materials for MEMS (Silicon , polymer , Metal) , Packaging and encapsulation of MEMS .	4	CO3

IV	Fuel Cell	Introduction , Classification of Fuel cell Construction & working of Alkaline Fuel cell, Molten carbonate fuel cell , Polymer electrolyte membrane Cell , Solid OXide fuel cell .	4	CO4
V	Energy harvesting	Piezoelectric Effect , Materials and models for Piezoelectric effect ,Piezoelectric Electricity generator , energy harvesting application , human power	4	CO5
VI	Nanocomputing	Nanocomputer Introduction , Nano computer Building block , DNA Carbon nanotubes and nanowires, CHEMICALLY ASSEMBLED ELECTRONIC NANOTECHNOLOGY (CAEN)	6	CO6

Lab Objectives:

1. To develop scientific understanding of the physics concepts.
2. To develop the ability to explain the processes and applications related to science subjects.
3. To apply skills and knowledge in real life situations.
4. To improve the knowledge about the theory concepts of Physics learned in the class.
5. To improve ability to analyze experimental result and write laboratory report.
6. To develop understanding about inferring and predicting.

Lab Outcomes:

Learners will be able to

1. Learn Characteristics and use of Photovoltaic Cell
2. Learn Characteristics and use of MEMS sensors
3. Learn to use color sensors and Color measurement
4. Learn to Calibrate RGB LED
5. Learn to use CMOS image sensor
6. Learn use of virtual lab and simulation Experiments

List of Experiments. (Minimum five experiments required)

be used for awarding marks. A proper rubric should be framed.

Rationale:

Most of the engineering branches are being off-spring of basic sciences where physics is playing a pivotal role in concept and understanding of foundation of core engineering branches. This syllabus is developed by keeping in mind, needs of all branches that we offer in University of Mumbai. In the distribution of modules, core physics and its applied form are given priority. Further, it is ensured that these modules will cover prerequisites needed and will remain aligned to the requirements for a certain group of engineering courses to be introduced in higher semesters as core subjects or as interdisciplinary subjects.

Course Objectives:

1. To provide students with a basic understanding of Semiconductors in the field of Basic Engineering.
2. To explain basic importance of p-n junction diodes.
3. To learn about few special diode important for semiconductor industry.

4. To understand the basics of transistors and their applications in the field of electronics.
5. To build foundation of Field effect transistors and their applications.
6. To give exposure to the upcoming field of Nano technology in the field of solid state physics.

Course Outcomes:

1. Learners will be able to **USE** and **DEMONSTRATE** his/ her ability earned here to **apply it to calculate Hall voltage**
2. Learners will be able to **CALCULATE** barrier potential and **PLOT I-V** characteristics of p-n junction diode.
3. Learners will be able to **PLOT I - V** characteristics and understand their applications of some special diodes
4. Learners will be able to **CALCULATE** current gain and **PLOT I-V** characteristics for CB-CE configurations.
5. Learner will be able to **PLOT I-V** characteristics and understand applications of FETs
6. Learner will be able to **APPLY** the knowledge of Nano Technology to certain emerging areas of technology.

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
	Prerequisite	Band theory of solids Fermi Dirac Distribution function Density of states and	-	-
1	Basics of Semiconductors	Types of semiconductors, Carrier Concentration in Intrinsic Semiconductors, Fermi level of Intrinsic Semiconductors, Variation of Fermi level of Intrinsic Semiconductors, wrt temperature. Extrinsic Semiconductors, Fermi level of Extrinsic Semiconductors, Variation of Fermi level of Extrinsic Semiconductors, wrt temperature and Impurity Concentration, Equation of conductivity with current flow, Hall Effect, Calculation of Hall Voltage.	4	CO1
2	Junction diode	Formation of p-n junction,	4	CO2

		calculation of barrier potential Diode equation, p-n junction in forward Bias, p-n junction in Reverse bias, Current- voltage curve for p-n junction diode, LED and its working		
3	Important Diodes	Working of: Photo diode, solar cell, Zenerdiode ,Varactor diode , Gunn diode and their applications.	4	CO3
4	Bipolar Junction Transistors	BJT Structure and Operation - BJT structure, Modes of operation,CB, CE I-V characteristics BJT Amplification and Switching - Current gain, BJT as a switch,	4	CO4
5	Field Effect Transistors	Field-Effect Transistors (FETs) - FET types: JFET, MOSFET, Structure and operation MOSFETs in Detail - MOSFET structure, Enhancement and depletion modes, Threshold voltage MOSFET Applications - MOSFET as a switch,	6	CO5
6	NanoTechnology	Introduction to Nanotechnology , Properties (optical, Electrical, Structural, Mechanical) Importance of surface to Volume ratio, Bonding in solids (Vander walls interactions) , Application: Lithography, Single Electron Transfer (SET), Spin Valves.	4	CO6

		Internal Assessment (IAT)			End Sem Exam	Exam Duration (in Hrs)			
		IAT-I	IAT-II	IAT-I + IAT-II (Total)					
BSC2023	Physics of Measurements and Sensors	15	15	30	45	2		--	75

Rationale:

Most of the engineering branches are being off-spring of basic sciences where physics is playing a pivotal role in concept and understanding of foundation of core engineering branches. This syllabus is developed by keeping in mind, needs of all branches that we offer in University of Mumbai. In the distribution of modules, core physics and its applied form are given priority. Further, it is ensured that these modules will cover prerequisites needed and will remain aligned to the requirements for a certain group of engineering courses to be introduced in higher semesters as core subjects or as interdisciplinary subjects.

Course Objectives:

1. To provide students with a basic understanding of Measurements in the field of Basic Engineering.
2. To explain basic importance of Interference in the field of measurements.
3. To learn foundation of Transducers in the area of measurements..
4. To describe the significance of solid state sensors.
5. To build foundation of temperature measurements required in the field of technology..
6. To give exposure to upcoming field of Nano technology in the field of Measurements.

Course Outcomes:

1. Learners will be able to **USE** and **DEMONSTRATE** his ability earned here to **EXAMINE** the erroneous results of measurement systems.
2. Learners will be able to **EXECUTE** the flatness test using Light waves
3. Learners will be able to **EXAMINE** the use of appropriate transducers for application.
4. Learners will be able to **EXAMINE** the use of appropriate sensors for application
5. Learner will be able to **IMPLEMENT** and **ORGANISE** various temperature measurement techniques ranges.
6. Learner will be able to **IMPLEMENT** knowledge learned here to nano measurements

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
	Prerequisite	Unit and Dimensions , Wave optics, Piezo electric effect, Wheatstone bridge, Potentiometer, Wave particle duality.	-	-
1	Introduction	Preliminary Idea of Physical Measurements: Principle of Measurement, Error of Measurement, Correction, Correctness of Measurement Reliability of Measurements, Verification, Calibration, Measuring Instruments : Measuring range, Sensitivity, Scale Intervals, Response time, repeatability, Inaccuracy, Precision ,Accuracy. Sources of error: Static error, Environmental error, Characteristic error dynamic error Statistical Treatment of errors : Sample mean, Sample Standard deviation, Population Mean, Population standard Deviation, Principles of least Squares	6	CO1
2	Measurements by light – Wave Interference	Significance of monochromatic light in interference, Interferometry applied to flatness testing , surface contour test	4	CO2
3	Transducers	Transducers: Classification by function, classification by performance, classification by	4	CO3

		<p>output.</p> <p>Developments in transducer technology :Solid state transducer, Optical transducers , Piezoelectric Transducers</p> <p>Resistive Transducers:</p> <p>Potentiometer , Strain Gauges, Resistive Temperature Transducers</p> <p>Inductive Transducers : LVDT</p> <p>Optical measurements system:</p> <p>Thermal photo detectors</p>		
4	Solid state sensors	Hall Effect, Measurement of Hall voltage , Piezo electric effect and its use as source in Ultrasonic system, Its application in flow measurements, Ultrasonic distance meter	4	CO4
5	Temperature and its measurements	<p>Concept of Heat , Temperature and its measurements, Bimetallic thermometers, Platinum Resistance thermometers, Thermoelectric thermometers Negative Temperature Coefficient (NTC) Thermistors, Factors for the selection of a thermometer for a particular use, Temperature Range and Comparison of various thermometers. Calibration of PT-100 for temperature measurement.</p>	4	CO5
6	Nanotechnology	<p>Introduction to Nanotechnology , Properties (optical, Electrical, Structural, Mechanical) Importance of surface to Volume ratio, Bonding in solids (Vander walls interactions),Scanning Electron Microscope (SEM), Transmission Electron Microscope (TEM), Atomic Force Microscope (AFM), Applications in sensing toxic gases, gas sensing capacitors, Introduction to lithography, water purification</p>	4	CO6

Text Books:

Assessment:

Internal Assessment Test (IAT) for 20 marks each:

- IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

End Semester Theory Examination:

Question paper format

- Question Paper will comprise a total of **five questions each carrying 15 marks**. Q.1 will be **compulsory** and should **cover the maximum contents of the syllabus**
- Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **three questions** need to be answered

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned

---------	---	----	----	----	----	----	--	----

Lab Objectives:

1. To develop scientific understanding of the physics concepts.
2. To develop the ability to explain the processes and applications related to science subjects.
3. To apply skills and knowledge in real life situations.
4. To improve the knowledge about the theory concepts of Physics learned in the class.
5. To improve ability to analyze experimental result and write laboratory report.
6. To develop understanding about inferring and predicting.

Lab Outcomes:

Learners will be able to:

1. Measure certain physical parameters like R.I.,
2. Understand function of Solid state sensors.
3. Calibrate thermocouple
4. Measure physical parameters using ultra sound sensors.
5. Use virtual lab effectively to perform experiments

List of Experiments.

Sr No	List of Experiments	Hrs	LO
01	Measurements of R.I of a suitable liquid using Newton's ring Experiment	1	LO1
02	Measurement of Hall Voltage	1	LO2
03	Carrier concentration using Hall Effect	1	LO2
04	Measuring distance using ultrasonic distance meter flow	1	LO4
05	Calibration of PT100	1	LO3
06	Calibration of J /K type thermocouple	1	LO3
07	Simulation experiments based on nanotechnology using open source simulation	1	LO5
08	Study and use of pressure transducer	1	LO2
09	V-I characteristic of photo diode	1	LO2
10	Characteristics of LDR	2	LO2

BSC2031	Engineering Materials	15	15	30	45	2		--	75

Rationale:

Chemical science has contributed in many ways to most of the Engineering branches where “Engineering Materials” such as alloys, ceramics, composites can be prerequisites to many subjects of all core groups. Polymeric materials can be learnt from the perspective of applications as Polymer semiconductor, Polymer batteries which are common in technology.

Course Objectives:

1. To study the composition, properties and functions of various alloys
2. To learn the types, properties and uses of various Ceramics
3. To learn the composition, properties and functions of various Composite materials
4. To learn important types, synthesis and uses of plastics and elastomers.
5. To study the different types of advanced polymers with their applications.
6. To study the types, properties and uses of various Nanomaterials

Course Outcomes:

Student will be able to –

1. Identify different types of alloys and use them for specific engineering applications
2. Familiar with different types of ceramics and apply them for different engineering purposes

3. Identify different types of composite materials for the industrial uses
4. Utilize different plastics and elastomers in industries
5. Recognize different advanced polymers for specific engineering applications
6. Find different nanomaterials for the scientific applications

Prerequisite:

1. Knowledge about purpose of making alloys
2. Knowledge about Constituents of Composites and their functions.
3. Knowledge of basic properties of polymers.

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
I	Alloys	<p>A) Ferrous alloys – Plain-carbon steels, Heat and Shock resisting steels, Stainless steels. Effect of the alloying element- Ni, Cr, Co, Mn, Mo, W and V.</p> <p>B) Aluminium alloys – Composition, properties and uses of i) Duralumin, ii) Magnalium.</p> <p>C) Copper alloys – Composition, properties and uses of i) Brass – Dutch Metal and German Silver and ii) Bronze – Gun metal and Nickel bronze.</p> <p>D) Alloys of Pb – Composition, properties and Uses of i) Wood’s metal ii) Tinman’s solder.</p> <p>E) Numerical based on Composition, density and weight of an alloy</p>	4	CO1
II	Ceramics	<p>A) Introduction of Ceramics – Definition, types, properties and uses.</p> <p>B) Glass – Definition, Properties, Types with uses.</p> <p>C) Abrasives – Natural and Artificial Abrasives – Examples, Properties and Uses.</p> <p>D) Optical fibres – Definition, Components of optical transmission system, Advantages of optical fibre communication, Applications of glass-based fibre - optical fibres.</p>	4	CO2
III	Composites	<p>A) Types of Composites, sub-types and Applications: - i) Fibre- reinforced composites, ii) Layered-composites (Laminates), iii) Particulate-</p>	4	CO3

		composites. B) Bio-composites – Definition, Classification and Applications.		
IV	Plastics and Elastomers	A) Introduction to Plastics - Thermoplastic and Thermosetting plastics, compounding of plastics, Application of Plastics, Numerical based on Degree of polymerisation, Density and mass, tensile strength of polymer B) Introduction to elastomers - structural requirement of elastomer, natural rubber, processing of natural rubber, drawbacks, compounding of rubber C) Synthesis of commercial polymers: i) Plastics: Preparation, properties and uses of Polymethyl Methacrylate (PMMA), polytetrafluoroethylene (PTFE) ii) Elastomers: Preparation, properties and uses of Polyurethane Rubber, Silicone rubber	5	CO4
V	Advanced Polymers	A) Conducting polymers, B) Bio- polymers, C) Liquid crystal polymers, D) Intelligent (smart) polymers	3	CO5
VI	Nano materials	A) Definition, Types of Nanostructured materials, Applications of Nanomaterials. B) Graphene, C) Types of Carbon Nanotubes (SWCNTs and MWCNTs) – Properties and Uses.	4	CO6

Lab Objectives:

1. To apply knowledge acquired during the theory class in carrying out the experiments for qualitative and quantitative determination.
2. To analyse experimental results and write laboratory reports.

Lab Outcomes:

After completion of experiment, the learners will be able to:

1. Learn various quantitative analytical techniques to determine % of elements from alloy samples
2. Synthesize UF/PF resin at laboratory level

Prerequisite:

1. Knowledge of basic safety practices in Chemistry Laboratory
2. Knowledge of volumetric analysis

List of Experiments.

Sr No	List of Experiments	Hrs
01	Determination of Sn from solders volumetrically	01
02	Determination of Cu by colorimetry	01
03	Determination of Fe by colorimetry	01
04	Determination of % purity of iron	01
05	Synthesis of Urea formaldehyde resin	01
06	Synthesis of Phenol formaldehyde resin	01
07	Determination of viscosity average molecular weight of polymer	01
08	Determination of glass transition temperature of polymer	01

02	Advantages and applications of Ceramics	1
03	Note on FRPs	1
04	Synthesis, properties and uses of any two plastics/elastomers	1
05	Note on Liquid Crystal polymers	0.5
06	Note on CNTs	0.5

Assessment :

Term Work: Term Work shall consist of at least 5 to 6 practicals based on the above list. Also, Term work Journal must include at least 4 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
BSC2032	Environmental Chemistry and Non-conventional energy sources	2		-	2		-	2

Course Code	Course Name	Theory					Term work	Pract / Oral	Total
		Internal Assessment (IAT)			End Sem Exam	Exam Duration (in Hrs)			
		IAT-I	IAT-II	IAT-I + IAT-II (Total)					
BSC2032	Environmental Chemistry and non-conventional energy sources	15	15	30	45	2		--	75

Rationale:

Chemical science has contributed in many ways to most of the Engineering branches where “Environmental Chemistry” is the modern approach to learn impact of Technology on habitat and can be common to all Core Groups. “Non-Conventional Energy Study” is the matter of general approach to all Core groups as Energy issue is the most recent concern even for designing computational engines (Include hardware & software energy efficient).

Course Objectives:

1. To gain the knowledge of different air pollutants and their control methods.
2. To identify water pollutants of different sources and suggest methods for the treatments.

3. To study the solid and hazardous waste management methods
4. To identify different types of non-conventional energy sources.
5. To gain knowledge of biomass energy and processes.
6. To demonstrate sustainable practices to make the environment clean

Course Outcomes:

Student will be able to –

1. Apply the knowledge of air pollution control to save the environment.
2. Analyze the quality of waste water to clean the water bodies
3. Identify methods for solid and hazardous waste treatment to protect the health and environment.
4. Compare the availability and efficiency of performance and environmental impact of non-conventional energy sources.
5. Determine the sources and applications of biomass to save the environment
6. Apply the knowledge of sustainable practices in different parts of world to protect the environment

Prerequisite:

1. Knowledge of different types of pollution.
2. Knowledge of basics of pollution control
3. Knowledge of demerits of conventional energy sources.

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
I	Air Pollution and Atmospheric Chemistry	<p>A) Chemistry and mechanism of some global effects of air pollution – Acid rain, Ozone hole, Photochemical smog</p> <p>B) Gaseous Pollutants: i) Measurement of gaseous pollutants; ii) Methods to control emissions of sulphur oxides, nitrogen oxides, carbon monoxide and gaseous hydrocarbons.</p> <p>C) Automotive emission controls: Measurement and control, catalytic convertors.</p>	4	CO1
II	Water & Waste water Treatment and Management	<p>A) Classification of water pollutants – Organic, Inorganic, Suspended, Radioactive, Heat.</p> <p>B) Monitoring Techniques and methodology for following parameters: Hardness, pH, Dissolved oxygen, Chloride (Numerical)</p>	4	CO2

		<p>C) Point and nonpoint sources of water pollution</p> <p>D) Characteristics of waste water, Acidification, Eutrophication and thermal stratification of lake water.</p> <p>E) Wastewater treatment: Primary treatment, Secondary Treatment – Activated Sludge Process, Tertiary Treatment</p> <p>F) Relevance of determining Biochemical Oxygen Demand (BOD) and Chemical Oxygen Demand (COD) with reference to waste water treatment process, numerical</p>		
III	Solid and Hazardous Waste Management	<p>A) Integrated solid waste management; Waste hierarchy; Rules and regulations for solid waste management in India. Definition and Composition Hazardous waste.</p> <p>B) Hazardous waste management: Control Methods: - i) Physical Methods – Sedimentation, Adsorption, Ion exchange methods, Electrodialysis, Reverse Osmosis ii) Chemical Methods – Neutralization, Chemical precipitation, chemical oxidation-reduction, biological treatment, incineration</p>	4	CO3
IV	Introduction to non-conventional (Renewable) energy sources	<p>A) Need of non-conventional energy sources.</p> <p>B) Renewable Sources of Energy such as Hydro, Solar, Wind, Biomass, Tidal and Geothermal - their availability and limitations.</p>	4	CO4
V	Non-conventional Energy sources	<p>A) Biomass Energy: - i) Definition, ii) Sources of Biomass – Wood, Agricultural crop, Animal waste, Algae, Sewage waste iii) Advantages and disadvantages of Biomass, iv) Important Biomass processes – Pyrolysis, Gasification, Anaerobic decomposition, v) Uses of biomass – (Direct) for heat generation and (Indirect) for conversion to biofuel</p> <p>B) Hydrogen fuel cell</p>	4	CO5
VI	Sustainable Practices	<p>A) Energy Resources available</p> <p>B) Consumption practices in different parts of the world.</p>	4	CO6

		C) Natural Resource management & Environmental Ethics D) Importance of Responsible Consumption. E) Introduction to concept of Energy Audit

BSC2033	Introduction to Computational Chemistry	15	15	30	45	2	25	--	100

Rationale:

This subject is a Common to All Core Groups as this involves basic simulation Design Techniques to understand real world phenomena. It links real world to correlated simulation essential to understand how simulation works with reliability. Generation of data and data analysis with experimentation is the core theme of this subject and can be a choice of all core Groups.

Course Objectives:

1. To know the fundamental principles of Computational Chemistry required to solve engineering problems
2. Practical implementation of fundamental theory concepts
3. To enable the students to understand the role of computers in chemistry
4. To study the applications of chemistry in various engineering and technological processes

Course Outcomes:

Student will be able to –

1. Understand computational chemistry, distinguishing it from experimental chemistry, and articulate its role within the broader field of chemical sciences.
2. Apply mathematical concepts and theories that underpin computational chemistry techniques, such as quantum mechanics and statistical mechanics
3. Utilize computers to understand role of computer simulations to understand and solve basic problems in chemistry
4. Develop the basic understanding of scientific simulation and modeling
5. Apply computational and theoretical chemistry concepts to understand chemistry behind every day and industrial processes
6. Apply the computational tools and methodology to represent chemical systems

Prerequisite:

1. Basic understanding of chemical principles, including atomic structure, chemical bonding, stoichiometry, and thermodynamics.
2. Knowledge of differential and integral calculus, including concepts of limits, derivatives, and integrals.
3. Understanding of basic numerical techniques for solving mathematical problems, such as root-finding, numerical integration, and differential equations.
4. Familiarity with general scientific software and tools, such as MATLAB and basic knowledge of operating systems (Linux, Windows).

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
I	Introduction to Computational Chemistry	A) Definition and scope B) Importance in modern chemical research C) Computational investigations	4	CO1

Lab Objectives:

- To study applications of computational chemistry
- To learn to simulate and predict molecular structures and properties using different kinds of calculations based on quantum and classical physics

Lab Outcomes:

After completion of experiment, the learners will be able to:

1. Attain proficiency in using major computational chemistry software packages (e.g., Gaussian, GAMESS) to conduct simulations and analyze chemical systems.
2. Apply principles of Computational Chemistry
3. Simulate and predict molecular structures and properties using different kinds of calculations.
4. Understand the complementarity of computational and experimental approaches in chemistry.
5. Develop research skills and problem-solving abilities using computational chemistry techniques.
6. Adhere to ethical standards and practices in computational chemistry research.

01	Introduction to key software packages (e.g., Gaussian, GAMESS)	1	LO1
02	Setting up and running basic calculations	1	LO2
03	Interpreting output files	1	LO3
04	Fundamentals of Molecular interaction	1	LO4
05	Fundamentals of Chemical reaction	1	LO5
06	Prediction of molecular structure	1	LO6

Sr No	List of Assignments / Tutorials	Hrs
01	Research and summarize three key applications of computational chemistry in different fields (e.g., drug design, material science, environmental chemistry).	2
02	Derive and explain the significance of the Schrödinger equation.	1
03	Define force fields and list their main components (bond stretching, angle bending, torsional interactions, non-bonded interactions).	1
04	Draw a simple PES for a diatomic molecule by hand or using a graphing software. Label the critical points (minima, maxima, saddle points).	1
05	Download and install a molecular visualization software (e.g., Avogadro, VMD). Use the software to build and optimize the geometry of a small organic molecule (e.g., ethanol). Take screenshots of the optimized structure and include them in a report. Describe the process you followed	2

	and discuss any changes in bond lengths or angles observed during optimization.	
06	Follow a tutorial to perform a simple MD simulation of a water box using online resources or an introductory MD software package.	2

Assessment :

Term Work: Term Work shall consist of at least 5 to 6 practicals based on the above list. Also,

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Practical	Tutorial	Theory	Practical	Tutorial	Total
ESC201	Engineering Graphics	3	-	-	3	-	-	3

Term work Journal must include at least 4 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Course Code	Course Name	Theory					Term work	Practical / Oral	Total
		Internal Assessment (IAT)			End Semester Exam	Exam Duration (in Hrs.)			
		IAT-I	IAT-II	IAT-I + IAT-II (Total)					
ESC201	Engineering Graphics	20	20	40	60	3	--	--	100

Rationale:

Engineering Graphics is an essential subject across all engineering disciplines, as it develops crucial visualization skills, enabling students to comprehend and design complex structures and systems in three dimensions. It facilitates precise technical communication, allowing engineers to convey design ideas, concepts and specifications effectively, which is vital for collaboration in multidisciplinary

teams. It is a language engineers, designers, and architects use to convey their ideas to manufacturers, constructors, and stakeholders. This subject enhances problem-solving abilities of students to create and interpret detailed technical drawings, helping to identify and resolve design issues early. Furthermore, it emphasizes accuracy and precision, which are critical in producing exact drawings for fabrication and assembly across all branches of engineering.

Course Objectives:

1. To impart and inculcate proper understanding of the theory of projection.
2. To impart the knowledge to read and interpret a drawing
3. To improve the visualization skill.
4. To enable students to represent three-dimensional objects on a two-dimensional surface in a way that accurately conveys their shape, size, and orientation.
5. To acquaint students with representing internal features of a three-dimensional object by way of section that accurately conveys their internal orientation.

Course Outcomes: Learners will be able to ...

1. Apply basic concepts of geometrical constructions to create engineering curves.
2. Apply the basic principles of projections in Projection of Lines and Planes
3. Apply the basic principles of projections in Projection of Solids.
4. Apply the basic principles of sectional views in Section of solids.
5. Apply the basic principles of projections in converting pictorial views into orthographic Views.
6. Apply the basic principles of projections in converting orthographic Views into isometric drawing.

DETAILED SYLLABUS:

Sr. No.	Name of Module	Detailed Content	Hours	CO Mapping
0	Prerequisite	1.To draw basic geometric shapes like pentagon, hexagon and square (in different orientation). 2. Divide a line into equal number of parts. 3. Divide a circle into equal number of parts. Comment (Prerequisite syllabus should not be considered for paper setting)	01	
I	Introduction to Engineering Drawing	1.1 Introduction to Engineering Graphics and its significance in Engineering domain. Types of Lines, Dimensioning Systems as per IS conventions. 1.2 Introduction to plain and diagonal scales. 1.3 Engineering Curves: Basic construction of Cycloid, Involute and Helix (cylinder only).	03	CO1
II	Projections of Points, Lines and Planes	2.1 ProjectionsofPoints Projections of points in any quadrants as well as resting on planes. 2.2 ProjectionsofLines Projections of linesinclinedto boththe reference planes(Excluding Tracesof lines).	06	CO2

		Simple application based problems on projection of lines. 2.3 Projection of Planes Projections of planes (Triangular, Square, Rectangular, Pentagonal, Hexagonal and Circular) inclined to both the Reference Planes. (Exclude composite planes).		
III	Projections of Solids	Projections of solids with the axis inclined to one and both reference planes. (prism, pyramid, cylinder and cone only). Triangular to hexagonal prism and pyramids to be considered. Exclude Spheres, Composite, hollow solids and frustum of solids). Use change of position or Auxiliary plane method.	06	CO3
IV	Sections of Solids and Development of Surfaces	4.1 Sections of Solids Sections of Prism, Pyramid, Cylinder, & Cone cut by plane perpendicular to at least one reference plane (Exclude Curved Section Plane). Use change of position or Auxiliary plane method. 4.2 @ Development of Surfaces Development of lateral surface (only) of prism and pyramid only.	08	CO4
V	Orthographic Projections	5.1 Orthographic Projections Fundamentals of orthographic projections like concept of quadrants, observer position, horizontal, vertical and profile plane, symbol etc. Different orthographic views, First and Third angle method of projection. Views of a simple machine part as per the first angle projection method recommended by I.S. 5.2 Sectional Orthographic Projections Fundamentals of sectional projections like concept of section plane, its representation, section lines and its features, need of sectional views, rib and web in section. Types of section and its representation. Different views of a simple machine part as per the first angle projection.	09	CO5
VI	Isometric Views	Basic concept of isometric projection like why it is called isometric, what does it represent, its need, isometric and non-isometric lines, isometric axes and isometric scale. Difference between isometric projection and isometric views. Conversion of orthographic views to isometric views (Exclude sphere).	07	CO6
@ only in Term Work and to be considered for lab course (i.e.; Questions will not be asked in any examination).

Lab Objectives:

1. To impart and inculcate proper understanding of the theory of projection.
2. To impart the knowledge to read and interpret a drawing
3. To improve the visualization skill.
4. To enable students to represent three-dimensional objects on a two-dimensional surface in a way that accurately conveys their shape, size, and orientation.
5. To acquaint students with representing internal features of a three-dimensional object by way of section that accurately conveys their internal orientation.
6. To impart basic AutoCAD skills.

Lab Outcomes: Learners will be able to ...

1. Apply basic concepts of geometrical constructions to create engineering curves.

2. Apply the basic principles of projections in projection of basic geometric objects.
3. Apply the basic principles of projections in projection of regular solid objects.
4. Apply the basic principles of projections in converting pictorial views into orthographic Views.
5. Apply the basic principles of projections in converting orthographic views into isometric drawing.
6. Apply basic AutoCAD skills in construction of views and objects.

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours	LO Mapping
I	Basic Engineering Curves	1.1 Construction of plain and diagonal scales for simple applications. 1.2 Construction of basic engineering curves like cycloid, involutes and helix (cylinder only).	02	LO1
II	Projections of Lines and Planes	2.1 ProjectionsofLines Simple problems to apply the concept of projections of linesinclinedto boththe reference planes. 2.2 ProjectionsofPlanes Problems on projections of planesinclinedto boththe reference planes.	04	LO2
III	Operations on Solids	3.1 Projections of Solids Problems on projections of solids with the axis inclined to one and both reference planes. Use auxiliaryplanemethod. 3.2 SectionsofSolids Problems on sections of solids cut by plane perpendicular to atleast one reference plane. Use auxiliaryplanemethod. 3.3 @Development of Surfaces Development of lateral surface (only) of prism, pyramid and cylinder.	04	LO3
IV	Orthographic Projections	4.1 OrthographicProjections Construction of orthographic views from pictorial view of an object. Use of proper dimensioning technique for dimensioning the drawn views. 4.2 SectionalOrthographicProjections Construction of orthographic views (with section) from pictorial view of an object. Location of section plane in concerned views.	04	LO4
V	Isometric Views	Conversionof orthographicviewstoisometricviews.	02	LO5
VI	Drafting Technique	6.1 OverviewofComputerGraphicsCovering: Basic information about the drafting software (CAD). Demonstrating knowledge of the theory of CAD software such as: MenuSystem, Toolbars	08	LO6

		<p>(Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.</p> <p>6.2 Customization & CAD Drawing: Consisting of setup of the drawing page and the printer including scale settings, setting up of units and drawing limits, ISO and ANSI standards for coordinate dimensioning.</p> <p>6.3 Annotations, layering & other Functions Covering: Applying dimension to objects, applying annotations to drawings, setting up and use of layers, layers to create drawings, Create, edit and use customized layers, changing line lengths through modifying existing lines (extend/lengthen).</p>

List of Experiments

Sr No	List of Experiments	Hrs	CO Mapping
01	Two problems on Scale and two problems on Engineering Curves to be drawn on drawing sheet.	02	LO1
02	Minimum four problems on Projection of Lines to be drawn on	02	LO2

	<i>drawing sheet.</i>		
03	Minimum four problems on Projection of Planes <i>to be drawn on drawing sheet.</i>	02	LO2
04	Minimum of two problems on Projection of Solids <i>to be drawn on drawing sheet.</i> Out of two problems one should be on the prism category (includes cylinder) and other should be on the pyramid category (includes cone).	02	LO3
05	Minimum of two problems on Section of Solids <i>to be drawn on drawing sheet.</i> Out of two problems one should be on the prism category (includes cylinder) and other should be on the pyramid category (includes cone).	02	LO3
06	Minimum two problems on Development of Surfaces <i>to be drawn on drawing sheet.</i> Out of two problems one should be on the prism category (includes cylinder) and other should be on the pyramid category (includes cone).	02	LO3
07	Two problems on Orthographic Projections (without section) <i>using drafting software.</i>	02	LO4, LO6
08	Two problems on Orthographic Projections (with section) <i>using drafting software.</i>	02	LO4, LO6
09	Minimum of two problems on Isometric Projections <i>to be drawn on drawing sheet.</i> Out of the two problems, one should include a circular portion and one problem should have a sloping surface. Also, one problem should be solved by natural scale and another problem should be solved by isometric scale.	02	LO5
10	Minimum two problems on Isometric Projections <i>using drafting software.</i>	02	LO5, LO6

* Out of four problems from practical numbers 4 and 5 at least one problem should be on cone and cylinder each.

* All printouts to be taken in the CAD Laboratory. Preferably, use A3 size sheets for printout.

Assessment

- a) **Term Work:** Term Work shall consist of all the above mentioned practical. Term work will also include the A3 size sketch book. Problems taught in theory class in A3 size sketch book may be considered for term work. Alternatively subject teacher may give problems on each topic to be solved by students as home assignments in the same A3 size sketch book.

Term Work Marks: 25 Marks

- Drawing Sheets + CAD printout = 15 Marks
- Theory Class A3 size Sketch Book = 5 Marks
- Attendance = 5 Marks

- b) **Practical Exam:** (2 hours/ 25 Marks)

End semester Practical exam will be held using CAD software only. This exam will be based on the following syllabus.

- Isometric projections. (One problem, compulsory)
- Orthographic Projection (without section)
- Orthographic Projection (with section)

* The examiners may decide the weightage of the questions asked in the practical exam.

- * Printout of the answers have to be taken preferably in A3 size sheets and should be assessed by external examiner only.
- * Knowledge of AutoCAD software, concepts of Engineering Graphics related to specified problem and accuracy of drawing should be considered during evaluation.

Rationale : This group of activities is to support Individual Interest , Skill utilization and desire to contribute towards social welfare and discharge a duty of good citizen. Activities offered are based on based on diverse scope, ranging from social activities and services, training as a volunteer at the time of National Emergencies, Training volunteer take part at National level campaign in the field of science and technology.

Course Objectives:

- Understanding knowledge from a range of disciplines
- Connecting knowledge to other knowledge, ideas, and experiences
- Constructing knowledge
- Relating knowledge to daily life
- Critical thinking
- Reflective thinking
- Effective reasoning
- Creativity

Course Outcomes:

- 1) Communicate effectively verbally and in writing by selecting proper content, tone, and demeanor for the situation
- 2) Demonstration effective use of technology for personal and professional activities, including electronic communication and information resources
- 3) Develop and actively pursue personal, academic and professional goals
- 4) Seek guidance and assistance as needed to achieve academic success, maintain good academic standing and progress toward a degree
- 5) Manage personal affairs by demonstrating empathy toward others, caring for one's self and seeking assistance as needed
- 6) Demonstrate professionalism toward peers, faculty, staff, employers and other members of the College community through social etiquette, effective communication and restraint

- **By Coordinator / program officer assigned at institute level**

DETAILED GUIDELINE :

1) For NSS /NCC

The students shall earn marks for all relevant activities, which include Sports and Games, NCC, NSS etc. Every student opted for NSS is expected

to participate in the program for a minimum of 120 hours in a semester to become eligible for the credit. Every time the student participates / completes a task, the same is entered in the attendance register meant for the purpose and to be certified by the concerned Head and the Academic Coordinator, at the end of the semester, the student shall be awarded marks for participation as devised for the respective program.

Assessment: (Towards termwork)

Evaluation Pattern for Participation

Sr No	Particulars	Max marks
1	Attendance & Routine Activities	05
2	Participation in Camps / Field Activity	10
3	Brief Report	10
	Total	25

2) For Civil Defense

Civil Defence offers members the opportunity to train in a variety of skills and to learn new techniques that will not only assist your local community in the event of an emergency but will also enhance your own personal development. All training is given by experienced instructors and is certified to national standards. Casualty Service – training for First Aid, Rescue Service – training for Rescue. Fire Fighting Service – training in certain areas of fire fighting. Pumping floodwaters and supplying water and emergency services for support to the community.

The activity can be started at college level/ Cluster level by coordinating with the local Civil defense center . Training will be arranged by the Local civil defense center set up by the Directorate of civil defense ,Maharashtra state in the region of College/ Cluster. a Civil Defense unit can be established by a Coordinator assigned amongst the desiring faculty member at college / cluster level .

OBJECTIVES OF CIVIL DEFENCE UNIT

To enable students to identify social issues and their solutions.

To develop self discipline and a helping attitude among the students.

To make students responsible citizens For protection of the environment.

To implement government programs and policies among people.

To prepare students to give scientific aid in natural and manmade disaster

	Total	25

3) For Amateur Radio

Amateur Radio is a scientific activity popularly known as “Ham Radio”. Amateur radio operators use two way radio stations and communicate with others similarly authorized using various modes of communication like voice, morse code, computers, internet etc. The things that amateur radio operators do with their radios are as diverse as the people themselves. The advanced amateur radio communication techniques include Automatic Position Reporting Systems using GPS information, Internet linking of Repeater stations, Interface with internet for exchange of emails, images etc as well as visual communication modes.

Amateur (HAM) Radio is both a Hobby activity and Service. It is an activity of self learning, inter-communication & technical investigation carried on the duly authorized persons (i.e. Amateur Radio Operators) for a personal aim and without pecuniary interest. A wireless communication network through Amateur Radio is one of the most effective and alternate medium of communication and can play a significant role in providing reliable communications when other normal communications fail. The skills of the trained amateur radio operator can be used for public service in times of need and national emergencies.

For participation in ISRO programs for student satellites and to act as a volunteer for radio monitoring of space missions, owning an Amateur (HAM) Radio operators certification is a legal and technical essential condition .

The Activity can be started at college level or at University inducted Nodal Centers. Interested faculties can be assigned a role of coordinator and enroll students for becoming Radio enthusiasts.

IKS201	Indian Knowledge System	-	-	-	-	-	--	--	--

Rationale:

The Indian Knowledge System (IKS) is vital for preserving India's rich cultural heritage, fostering holistic and sustainable practices, and integrating ancient wisdom with modern science to address contemporary challenges and enrich global knowledge.

Course Objectives:

1. To explore and understand the evolution of Indian scientific thought
2. To evaluate the historical and modern educational systems in our country
3. To analyse sustainable practices in ancient India
4. To know the richness of Indian Arts and Culture
5. To understand the contributions of Indian Scientists and Nobel Laureates
6. To understand the principles of good governance

Course Outcomes:

1. Recognize the sources and concepts of the Indian knowledge system
2. Learn about our history of Indian ancient knowledge and its significance in the current scenario.
3. Demonstrate sustainable development in various fields like Science, Technology, agriculture, industry, architecture performing arts, etc.
4. Understand and appreciate the rich heritage that resides in literature
5. Learn about the ancient Bhartiya education system in comparison with the modern era
6. Showcase the multi-dimensional nature of IKS and its importance in modern society

Prerequisite:

1. Students should have the foundational knowledge and skills necessary for a comprehensive understanding of IKS
2. Students should be familiar with the Indian Culture, Language, and History of Science and Technology in India.

DETAILED SYLLABUS:

S r. N o.	Name of Module	Detailed Content	Ho urs	CO Map ping
I	Introduction to the Indian Knowledge System (I.K.S.)	<ul style="list-style-type: none"> • Basic knowledge and scope of IKS • IKS in ancient India and modern India, • Bhartiya education system – ancient to modern era, • Sources of Education, Aim of Education, Curriculum, methods of learning, • Educational Institutes, Higher Educational Institutions, • Advantages and Disadvantages of the Gurukul System, • Distinguish between the Gurukul system And the Modern Education System 	3	CO2
II	Development of Scientific Thoughts in Ancient India	<ul style="list-style-type: none"> • Development in Science, Technology, Astronomy, Mathematics, and Life Sciences – Life Science, Physiology, Ayurveda, etc. 	4	CO1
II I	Development of Arts & Culture in India	<ul style="list-style-type: none"> • Introduction to Ancient Architecture (Arts, Forts, Paintings, Sculpture, Temple architecture, etc) • Development in performing arts & culture: Music, Art of singing, Art of dancing, Natyakala Cultural traditions and Folk arts 	5	CO4
I	Good Governance in	<ul style="list-style-type: none"> • Introduction to Indian religions • Moral and Ethical Governance 	5	

V	Ancient India	<ul style="list-style-type: none"> Vishva Kalyan through Vasudhaiva Kutumbkam Principles of Good Governance about Ramayana, Mahabharat, Artha Sastra and Kautilyan State 		CO6
V	Contribution of Indian Scientist & Nobel Laureates	<ul style="list-style-type: none"> Baudhayan, Aryabhatta, Brahmgupta, Bhaskaracharya, Varahamihira, Nagarjuna, Susruta, Kanada&Charak Rabindranath Tagore, C.V. Raman, Har Gobind Khorana, Mother Teresa, Subrahmanyam Chandrasekhar, Amartya Sen, V.S. Naipaul, Venkatraman Ramakrishnan, Kailash Satyarthi and Abhijit Banerjee 	5	CO5
V I	Sustainable Practices in Ancient India	<ul style="list-style-type: none"> Agriculture, waste management, water conservation, forest conservation, architecture, urban planning, biodiversity preservation, etc Yoga, pranayama, and meditation for health and well-being 	4	CO3

Assessment:

Suggested Pedagogy and assessment criteria for Teachers:

1. Project-based activities.
2. Presentation, Group Discussions, and Case studies.
3. Visit historical places.
4. Flip class mode/ Roleplay
5. Quiz MCQ
6. Assignment as per the modules: 06
7. Internal Assessment through flipped class and PowerPoint presentation along with documentation

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
IKS201	Indian Knowledge System	-	2*+2	-	-	2*+2	-	2

Course Code	Course Name	Examination Scheme						
		Theory Marks				Term Work	Practical/ Oral	Total
		Internal assessment (IAT)			End Sem. Exam			
		IAT-I	IAT-II	IAT-I + ITA-II (Total)				
IKS201	Indian Knowledge System	--	--	--	--	25	-	25

Objectives:

To provide practice in

1. Understanding Traditional Indian Knowledge Systems that have evolved in India over centuries
2. Learn practical applications of traditional Indian techniques in various fields
3. Promote the cultural heritage in Indian knowledge systems,
4. Develop skills to critically analyze Indian knowledge systems in contemporary contexts, assessing their relevance, strengths, and limitations.
5. Analyze interdisciplinary connections between Indian knowledge systems and modern scientific & technological advancements.

6. Apply communication & collaborative abilities through group discussions or presentations focusing on specific aspects of Indian knowledge systems.

Outcomes:

Learners will be able to

1. Learn about the evolution and practices of major Indian religions
2. Gain insight into the cultural diversity of India through its art, literature, music, dance, and architecture.
3. Recognize India's historical contributions to fields such as mathematics astronomy, medicine, and technology.
4. Develop critical ability to evaluate different interpretations of Indian knowledge systems in academics, literature, media, and popular culture.
5. Analyze how Indian philosophical and spiritual ideas have influenced global thought
6. Understand the relevance of Indian knowledge systems in contemporary contexts, including their role in shaping social values, ethics, and sustainable practices.

Sr No	Details of Activities	Hrs
01	Project-based activities	02
02	Presentation	02
03	Case studies	02
04	Visit historical places and write a report	02
05	Flip class mode	02
06	Quiz with MCQ	02
07	Comparative Study of IKS & other philosophical & scientific systems around the world	02
08	Group Discussions	02
09	Roleplay	02
10	Self-study activities	02

(The faculty can choose any of these activities for continuous assessment)

Assessment:

Suggested Pedagogy and assessment criteria for Teachers:

1. Total Assignments as per the modules: 06
2. Internal Assessment through flipped class and PowerPoint Presentation along with documentation

- **Sample Case Studies:**

- Mathematics of Madhava, NilakanthaSomayaji
- Astronomical models of Aryabhata
- Wootz steel, Aranumula Mirrors, and lost wax process for bronze castings
- Foundational aspects of Ayurveda
- Foundational aspects of Ashtanga yoga
- Foundational aspects of Sangeeta and Natya-shastra

Term Work:

- Assignments: 10 Marks
- Presentation/Group Discussion:10 Marks
- Attendance: 05 Marks

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned

		IAT-I	IAT-II	IAT-I + IAT-II (Total)					
VSEC201	Engineering Workshop-II	--	--	--	--	--	25	--	25

Lab Objectives

1. To impart training to help the students develop engineering skill sets.
2. To inculcate respect for physical work and hard labor.
3. To get exposure to interdisciplinary engineering domain.

Lab Outcomes: Learner will be able to...

1. Develop the necessary skill required to handle/use different carpentry tools.
2. Identify and understand the safe practices to adopt in electrical environment.
3. Demonstrate the wiring practices for the connection of simple electrical load/ equipment.
4. Design, fabricate and assemble pcb.
5. Develop the necessary skill required to handle/use different masons tools.
6. Develop the necessary skill required to use different sheet metal and brazing tools.

7. Able to demonstrate the operation, forging with the help of a simple job.

DETAILED SYLLABUS

	Detailed Content	Hrs.
	<p>Note: Trade 1 and 2 are compulsory. Select any ONE trade topics out of the topic trade 3 to 5. Demonstrations and hands on experience to be provided during the periods allotted for the same. Report on the demonstration including suitable sketches is also to be included in the term work</p> <p>CO-1 is related to Trade-1 CO-2 to CO-4 is related to Trade-2 CO-5 is related to Trade-3 CO-6 is related to Trade-4 CO-7 is related to Trade-5 CO evaluation is to be done according to the opted Trades in addition to Compulsory Trades.</p>	
Trade-1	<p>Carpentry(Compulsory)</p> <ol style="list-style-type: none"> 1. Use and setting of hand tools like hacksaws, jack planes, chisels and gauges for construction of various joints, wood tuning and modern wood turning methods. 2. Term work to include one carpentry job involving a joint and report on demonstration of a job involving wood turning 	10

Trade-2	<p>Basic Electrical work shop:(Compulsory):</p> <ol style="list-style-type: none"> 3. Single phase and three phase wiring. Familiarization. of protection switchgears and their ratings (fuse, MCB, ELCB). Wiring standards, Electrical safety in the work place safe work practices. Protective equipment, measures and tools. 4. Layout drawing, layout transfer to PCB, etching and drilling and soldering technique 	08
Trade-3	<p>Masonry:</p> <ol style="list-style-type: none"> 5. Use of masons tools like trowels, hammer, spirit level, square, plumb line and pins etc. demonstration of mortar making, single and one and half brick masonry , English and Flemish bonds, block masonry, pointing and plastering. 	06

Trade 4	Sheet metal working and Brazing: 6. Use of sheet metal, working hand tools, cutting , bending , spot welding	06
Trade-5	Forging (Smithy): 7. At least one forging job to be demonstrated and a simple job to be made for Term Work in a group of 4 students.	06

Text Books:

1. Workshop Technology, Volume-I, P.N.Rao, McGrawHill Publication
2. Elements of Workshop Technology, Vol-I, S.K. Hajra Choudhury, A K HajraChoudhury,Nirjar Roy, Media Promoters &Publishers Pvt Ltd

References:

1. Workshop Technology, Part-II, W A J Chapman, VIVA Books Pvt Ltd
2. A Course in Workshop Technology, B.S. Raghuvanshi, Dhanpat Rai and Co Ltd.

Assessment:

Term Work: Term Work shall consist of at least 3 practicals' based on the above list

Term Work Marks:25 Marks (Total marks) = 20 Marks (Experiment) + 5 Marks (Attendance)

Course Code	Course Name	Teaching Scheme (Contact Hours)			Credits Assigned			
		Theory	Pract.	Tut.	Theory	Pract.	Tut.	Total
VSEC202	Python Programming	-	2*+2	-	-	2	-	2

		Theory Marks				Term Work	Practical/ Oral	Total
		Internal assessment (IAT)			End Sem. Exam			
		IAT-I	IAT-II	IAT-I + IAT-II (Total)				
VSEC202	Python Programming	--	--	--	--	25	25	50

Lab Objectives:

1. To familiarize learners with Python's basic syntax, variables, data types, operators, and input/output functions.
2. To reinforce the understanding and application of conditional statements, loops, and functions in Python programming.
3. To instill learners on file handling, exception management, and Python packaging.
4. To Introduce object-oriented programming principles and their application in Python.
5. To explore advanced topics such as regular expressions, pattern matching, and GUI development.
6. To introduce and demonstrate the use of popular Python libraries for data handling.

Lab Outcomes: Learner will be able to

1. Demonstrate the proficiency in basic python programming or Create and perform various operations on data structures like list, tuple dictionaries and strings.
2. Apply Control Flow and Functions for efficient coding to solve problems.

3. Demonstrate proficiency in handling file operations, managing exceptions, and developing Python packages and executable files for modular programming.
4. Illustrate the concept of Object-Oriented Programming used in python.
5. Design Graphical User Interface (GUI) applications, utilizing appropriate Python libraries to create user-friendly interfaces.
6. Investigate and apply popular python libraries to conduct efficient data handling tasks.

Prerequisite: VSEC 102 C Programming

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hrs	LO Mapping
0	Prerequisite	Introduction to Programming: Understanding basic concepts like algorithms, flowcharts, and pseudocode. Problem-Solving Skills: Ability to approach problems methodically and apply logical thinking to develop solutions.	1	--
1	Introduction to Python	1. Basic Syntax and Data Types - Variables and data types, Operators, Input and output, 2. Data Structures- list, tuple, set and dictionary 3. Understanding the Syntax Transition: From C to Python	4	L1
2	Control Flow and Functions	2.1 Conditional Statements: if, else, elif 2.2 Loops: for and while loop 2.3 Functions- Defining functions, Parameters and return values, Scope and lifetime of variables	4	L2
3	File Handling, Packaging, and Debugging	3.1 File Handling- Reading and writing files, Exception handling 3.2 Creating Python Packages, Modules and executable files 3.3 Dealing with Syntax Errors, Runtime Errors and Scientific Debugging	4	L3
4	Object-Oriented Programming (OOP) in Python	4.1 Introduction to OOP: Classes and objects, Encapsulation, inheritance, and polymorphism 4.2 Creating Classes and Objects: Class attributes and methods Constructor and destructor. 4.3 Type of Inheritance: Single, multiple and multilevel inheritance	4	L4
5	Advanced Python Concepts	5.1 Regular Expressions, Pattern matching, Regex functions in Python 5.2 GUI Development using any Python GUI framework	5	L5

6	Python Libraries	6.1 Introduction to Popular Libraries 6.2 NumPy for numerical computing, 6.3 Pandas for data manipulation 6.4 Matplotlib for data visualization	4	L6
---	-------------------------	--	---	-----------

List of Experiments.

The following experiments serve as samples to illustrate the application of concepts covered in each unit. Instructors are encouraged to modify and adapt these experiments to meet the specific needs of the course and the learning objectives. It is essential to ensure that the fundamental concepts and skills outlined in each unit are adequately covered, even with modifications.

Week No	List of Experiments	Hrs
01	<p>Objective: To enable learners to transition their understanding of basic programming constructs from C to Python by focusing on Python's syntax, variables, data types, operators, and input/output functions, and comparing these elements with their equivalents in C</p> <ol style="list-style-type: none"> 1. Personalized Greeting Generator* - Write a python code to generate Personalized Greeting. 2. Calculating Areas of Geometric Figures* - Write a python program to calculate areas of any geometric figures like circle, rectangle and triangle. 3. Developing Conversion Utilities: Develop any converter such as Rupees to dollar, temperature convertor, inch to feet etc. 4. Calculating Gross Salary of an Employee*: Write a Python program to calculate the gross salary of an employee. The program should prompt the user for the basic salary (BS) 	02

	<p>and then compute the dearness allowance (DA) as 70% of BS, the travel allowance (TA) as 30% of BS, and the house rent allowance (HRA) as 10% of BS. Finally, it should calculate the gross salary as the sum of BS, DA, TA, and HRA and display the result.</p> <p>5. Calculating Simple Interest: Write a Python program to calculate the simple interest based on user input. The program should prompt the user to enter the principal amount, the rate of interest, and the time period in years. It should then compute the simple interest using the formula Simple Interest=(Principal×Rate×Time) /100 and display the result.</p> <p>6. Exploring Basic Arithmetic Operations in Python*: Write a Python program to explore basic arithmetic operations. The program should prompt the user to enter two numbers and then perform addition, subtraction, multiplication, division, and modulus operations on those numbers. The results of each operation should be displayed to the user.</p>	
02	<p>Objective: Mastering Python New Data Structures for Practical Applications</p> <p>Task List Manager*: Develop a Python program to manage a task list using lists and tuples, including adding, removing, updating, and sorting tasks.</p> <p>Student Enrollment Manager *: Create a Python code to demonstrate the use of sets and perform set operations (union, intersection, difference) to manage student enrollments in multiple courses / appearing for multiple entrance exams like CET, JEE, NEET etc.</p> <p>Student Record Keeper *: Write a Python program to create, update, and manipulate a dictionary of student records, including their grades and attendance.</p>	02
03	<p>Objective: To enable students to transition their understanding of control statements and loops from C to Python, emphasizing the adoption of Python syntax while reinforcing logical structures already learned.</p> <ol style="list-style-type: none"> 1. Triangle Pattern Generator Using Loops: Write a Python program to print a triangle pattern (give any), emphasizing the transition from C to Python syntax. 2. Number Type Identifier*: Develop a Python program that takes a numerical input and identifies whether it is even or odd, utilizing conditional statements and loops. 3. Character Type Identifier: Create a Python program to check whether the given input is a digit, lowercase character, uppercase character, or a special character using an 'if-else-if' ladder. 4. Multiplication Table Generator: Write a Python program to take a numerical input from the user and generate its multiplication table using loops. 5. Fibonacci Sequence Generator: Develop a Python program to print the Fibonacci sequence using a while loop. 6. Factorial Generator*: Design a Python program to compute the factorial of a given integer N. 7. Prime Number Analyzer*: Using function, write a Python program to analyze the input number is prime or not. 8. Simple Calculator Using Functions*: Implement a simple Python calculator that takes user input and performs basic arithmetic operations (addition, subtraction, multiplication, division) using functions. 9. Interactive Guessing Game: Develop a number guessing game where the program generates a random number, and the user has to guess it. Implement loops and conditional statements for user interaction. 	02
04	<p>Objective: To enable learners to proficiently handle file operations, manage exceptions, and create Python packages and executable files.</p> <ol style="list-style-type: none"> 1. Extracting Words from Text File *: Develop a Python program that reads a text file and prints words of specified lengths (e.g., three, four, five, etc.) found within the file. 	02

	<p>2. Finding Closest Points in 3D Coordinates from CSV: Write a python code to take a csv file as input with coordinates of points in three dimensions. Find out the two closest points.</p> <p>3. Sorting City Names from File: Write a python code to take a file which contains city names on each line. Alphabetically sort the city names and write it in another file.</p> <p>4. Building an Executable File*: Create a executable file for any program developed in earlier practical.</p>	
05	<p>Objective: To enable learners to proficiently handle errors and exceptions in Python programs, ensuring robust and fault-tolerant code. Learners will also develop debugging skills to identify, diagnose, and fix issues efficiently using scientific debugging methods.</p> <ol style="list-style-type: none"> 1. Basic Exception Handling*: Write a Python program that takes two numbers as input and performs division. Implement exception handling to manage division by zero and invalid input errors gracefully. 2. Custom Exceptions: Develop a Python program that simulates a banking system with a function to withdraw money. Raise custom exceptions for scenarios such as insufficient funds and invalid account numbers 3. Logging for Debugging: Enhance a Python program by adding logging statements to record the flow of execution and error messages. Use the logging module to configure different logging levels (INFO, DEBUG, ERROR). 4. Using a Debugger*: Demonstrate the use of a Python debugger (e.g., pdb or an IDE with debugging capabilities) on a sample program with intentional errors. Guide students on setting breakpoints, stepping through code, and examining variable values. 5. Scientific Debugging Techniques: Provide a Python program with multiple logic and runtime errors. Instruct students to apply scientific debugging techniques, such as binary search debugging, to identify and resolve the issues methodically 	02
06	<p>Objective: To apply object-oriented programming (OOP) principles in Python to model real-world scenarios and systems, fostering the development of modular, reusable, and efficient solutions. Fostering the ability to design and implement solutions for real-world problems.</p> <p>Choose any one real world scenario. Ask student to apply OOP principles such as encapsulation, inheritance, and polymorphism in practical scenarios. The sample real world scenarios are as follows.</p> <ol style="list-style-type: none"> 1. Event Management System: Implement an event management system using OOP concepts to organize and manage various aspects of college festivals or events. Design classes for events, organizers, participants, and activities. Include methods for event registration, scheduling, participant management, and activity coordination. 2. Online Shopping System: Develop classes for products, customers, and shopping carts. Include methods for adding items to the cart, calculating total costs, processing orders, and managing inventory. 3. Vehicle Rental System: Design a system using classes for vehicles, rental agencies, and rental transactions. Implement methods to handle vehicle availability, rental periods, pricing, and customer bookings. 	02

07	<p>Objective: To develop a graphical user interface (GUI) application for any use case. Choose any use case from below.</p> <ol style="list-style-type: none"> 1. GUI for Developing Conversion Utilities: Develop a Python GUI application that performs various unit conversions such as currency (Rupees to Dollars), temperature (Celsius to Fahrenheit), and length (Inches to Feet). The application should include input fields for the values, dropdown menus or buttons to select the type of conversion, and labels to display the results. 2. GUI for Calculating Areas of Geometric Figures: Develop a Python GUI application that calculates the areas of different geometric figures such as circles, rectangles, and triangles. Allows users to input the necessary dimensions for various geometric figures and calculate their respective areas. The application should include input fields for the dimensions, buttons to perform the calculations, and labels to display the results. 3. College Admission Registration Form: The college admission registration form collects essential personal, educational, and contact information from prospective students. Create a GUI as shown in Figure-1 that allows the user to input his/her name, branch and favorite game. When the user clicks the Submit button, it should display the output as illustrated.  <p style="text-align: center;">Figure-1: A basic GUI featuring text field and various buttons.</p>	02
08	<p>Objective: To enable learners to effectively utilize regular expressions in Python for pattern matching, validation, and data extraction tasks, enhancing their ability to process textual data efficiently and accurately.</p> <ol style="list-style-type: none"> 1. Script to Validate Phone Number and Email ID *: Write a Python script that prompts the user to enter their phone number and email ID. It then employs Regular Expressions to verify if these inputs adhere to standard phone number and email address formats 2. Password Strength Checker: Write a Python script that prompts the user to enter a password. Use regular expressions to validate the password based on these criteria: At least 8 characters long, Contains at least one uppercase letter, one lowercase letter, one digit, and one special character. 3. URL Validator: Develop a script that verifies if a given string is a valid URL. Use regular expressions to check for standard URL formats, including protocols (http, https), domain names, and optional path segments. Test with various URLs and ensure the validation covers common cases. 4. Extracting Data from Text *: Create a program that reads a text file containing various data (e.g., names, emails, phone numbers). Use regular expressions to extract specific types of data, such as email addresses, phone numbers, dates (e.g., MM/DD/YYYY format). 	02

09	<p>Objective: To equip learners with the skills to utilize the NumPy libraries for efficient numerical computing.</p> <ol style="list-style-type: none"> 1. Creating and Manipulating Arrays*: Write a Python program to create a 1D, 2D, and 3D NumPy array. Perform basic operations like reshaping, slicing, and indexing. 2. Array Mathematics*: Develop a Python script to create two arrays of the same shape and perform element-wise addition, subtraction, multiplication, and division. Calculate the dot product and cross product of two vectors. 3. Statistical Operations*: Write a Python program to calculate mean, median, standard deviation, variance, and correlation coefficients of a given array. 	02
10	<p>Objective: To provide learners with the knowledge and skills necessary to effectively use the Pandas library for data manipulation and the Matplotlib library for data visualization. Learners will engage in tasks that involve analyzing real-world datasets, creating meaningful visualizations, and drawing insights from data.</p> <p>Following task should be performing on a real-world dataset:</p> <p>Task1- Loading and Inspecting Data: Load a CSV file containing information on global COVID-19 cases into a DataFrame. Display the first few rows, check the data types, and summarize basic statistics.</p> <p>Task 2-Data Cleaning: Identify and handle missing values in the dataset. Remove any duplicate rows and ensure data consistency.</p> <p>Task 3-Data Aggregation: Perform aggregation operations to summarize data.</p> <p><i>Task 4- Plotting graphs: Generate a line plot showing the trend / bar plot to compare data/ histogram to show distribution/ scatter plot to examine relationships between variables.</i></p> <p>Instructors can choose other datasets relevant to the course objectives. Sample datasets and task list are as follows.</p> <p>1. Using the Iris Data (https://www.kaggle.com/datasets/saurabh00007/iris.csv), perform the following tasks:</p> <ol style="list-style-type: none"> i. Read the first 8 rows of the dataset. ii. Display the column names of the Iris dataset. iii. Fill any missing data with the mean value of the respective column. iv. Remove rows that contain any missing values. v. Group the data by the species of the flower. vi. Calculate and display the mean, minimum, and maximum values of the Sepal length column. <p>2. Using the Cars Data (https://www.kaggle.com/datasets/nameeerafatima/toyotacsv) perform the following tasks:</p> <ol style="list-style-type: none"> i. Create a scatter plot between the Age and Price of the cars to illustrate how the price decreases as the age of the car increases. ii. Generate a histogram to show the frequency distribution of kilometers driven by the cars. iii. Produce a bar plot to display the distribution of cars by fuel type. iv. Create a pie chart to represent the percentage distribution of cars based on fuel types. v. Draw a box plot to visualize the distribution of car prices across different fuel types. 	02

Note: * Marks indicate the minimum required programs to be taken. Additional programs should be covered based on the student's learning pace.

The goal of these experiments is to provide a structured approach to learning Python programming concepts. Instructors are encouraged to use these samples as a foundation and customize them to create engaging and effective learning experiences for the students.

Assessment:

Term Work: Term Work shall consist of at least 15 to 18 practicals based on the above list. Since the initial Python programs are small and straightforward, this allows for more practicals to be conducted, providing essential practice needed for mastering any programming language.

Internal Practical Exam: Conduct an internal practical exam after completing the first three modules of the Python course to assess and ensure the learner's understanding.

Term Work Marks: 25 Marks (Total marks) = 10 Marks (Experiment) + 10 Marks (Internal Practical Exam) + 5 Marks (Attendance)

Practical& Oral Exam: An Oral & Practical exam will be held based on the above syllabus.

1.	Necessity for starting the course:	The demand for Electronics and Computer Science professionals is consistently high, and individuals with a B.E. in Electronics and Computer Science can find opportunities in various sectors, including core companies, IT companies, startups, PSUs, and Govt. , and more.
2.	Whether the UGC has recommended the course:	Yes
3.	Whether all the courses have commenced from the academic year 2023-24	Yes, the Program started from A.Y 2024-25 as per NEP 2020 Policy.
4.	The courses started by the University are self-financed, whether adequate number of eligible permanent faculties are available?:	Self-financed Yes. Some experts are called as adjunct or visiting faculties.
5.	To give details regarding the duration of the Course and is it possible to compress the course?:	4 years. Not possible to compress the program.
6.	The intake capacity of each course and no. of admissions given in the current academic year:	60 seats for one division. Admissions will be held from 2024-2025 onwards.
7.	Opportunities of Employability / Employment available after undertaking these courses:	B.E. in Electronics and Computer Science can open up various opportunities and employment prospects across various private industries and government sectors. Additionally, as electronics and technology continue to advance, new roles and specialties within the Electronics and Computer Science field are continually emerging, providing diverse career paths for B.E. Electronics and Computer Science graduates. With various roles as Embedded Systems Engineer, Electronics Design Engineer, VLSI Design Engineer, Hardware Engineer, Signal Processing Engineer, Software Developer/Engineer, Data Scientist, AI/ML Engineer, Cloud Engineer, Dev Ops Engineer, IoT Engineer, Robotics Engineer, Cybersecurity Analyst, Automation Engineer, Telecom Engineer, Control Systems Engineer, and many more.
