### Preamble

To meet the challenge of ensuring excellence and NEP 2020 policy in engineering education, the issue of quality needs to be addressed, debated, and taken forward systematically. Accreditation is the principal means of quality assurance in higher education. The major emphasis of the accreditation process is to measure the outcomes of the program that is being accredited. In line with this Faculty of Science and Technology (in particular Engineering) of the University of Mumbai has taken the lead in incorporating the philosophy of NEP 2020 education in the process of curriculum development.

The second-year engineering course is a core training program to impart scientific and logical thinking training to learners in general, with a choice of course selection from the program core course, multidisciplinary minor, and vocational skill-enhanced course. Simultaneously, the objectives of NEP 2020 demand nurturing the core program and skills required for the Information Technology Branch of engineering in the learner. Keeping this in view, a pool of courses is offered in Core Courses covering fundamentals required to understand core and modern engineering practices and emerging trends in technology. Considering the shift in pedagogy and the convenience of a stress-free learning process, a choice-based subject pool is offered in the coursework under the heads of Information Technology in Engineering for open electives and multidisciplinary minor courses in the third and fourth semesters. Essentially, to give a glimpse of trends in the industry under vocational and enhanced skill practices, the pool is offered to nurture and develop creative skills in contemporary industrial practices. Criteria met in the structure is the opportunity for learners to choose the course of their interest in all disciplines.

Program Core Course Cover Information Technology core courses. Also, OE and MDM where a pool of subjects are given for selection. Considering the present scenario, diverse choices need to be made available to fulfill the expectation of a learner to aspire for a career in the field of current trends of Technology and interdisciplinary research. Ability enhancement can be achieved in Undergraduate training by giving an objective viewpoint to the learning process and transitioning a learner from a rote learner to a creative professional. for the purpose Design Thinking is introduced in the First Semester to orient a journey learner to become a skilled professional. Considering the NEP-2020 structure of award of Certificate & Diploma at multiple exit-point pools of Vocational skills is arranged for giving exposure to the current Industry practices.

The faculty resolved that course objectives and course outcomes are to be clearly defined for every course so that all faculty members in affiliated higher education institutes understand the depth and approach of the course to be taught, which will enhance the learner's learning process. NEP 2020 grading system enables a much-required shift in focus from teacher-centric to continuous-based learner-centric education since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation, which will enhance the quality of education. Credit assignment for courses is based on a 15-week teaching-learning process for NEP 2020, however, the content of courses is to be taught in 12-13 weeks, and the remaining 2-3 weeks are to be utilized for revision, tutorial, guest lectures, coverage of content beyond the syllabus, etc.

There was a concern that in the present system, the second-year syllabus must not be heavily loaded to the learner and it is of utmost importance that the learner entering into the second year of an engineering course should feel at ease by lowering the burden of syllabus and credits. This is necessary for a learner to get accustomed to the new environment of a college and to create a bond between the teacher and the learner. The present curriculum will be implemented for the Second Year of Engineering from the academic year 2025-26. Subsequently, this system will be carried forward for Third Year and Final Year Engineering in the academic years 2026-27, and 2027-28, respectively.

Note: \* One hour of tutorial class to be conducted for full class as practice/problem solving/discussion/theory.

#### **<u>Course Objectives:</u>** Students will be able to learn:

- 1. To familiarize with the Laplace Transform, Inverse Laplace Transform of various functions, and its applications.
- 2. To acquaint oneself with the concept of Fourier series, its complex form, and enhance problem-solving skills.
- 3. To familiarize the concept of complex variables, C-R equations with applications.
- 4. The fundamental knowledge of Trees, Graphs, etc.
- 5. To study the basic techniques of statistics, including correlation, regression, and curve fitting, for data analysis, Machine learning, and AI.
- 6. To understand some advanced topics of probability, random variables with their Distributions and expectations.

#### Course Outcomes:

| Sr.<br>No. | Course Outcomes   | Cognitive levels<br>of attainment as<br>per Bloom's |
|------------|---|---|
|            |   | Taxonomy  |
| On suc     | ccessful completion, of course, learner/student will be able to:  |   |
| 1          | Apply the concept of Laplace transform to solve the real integrals in engineering problems.   | L1, L2  |
| 2          | Apply the concept of inverse Laplace transform of various functions in engineering problems.  | L1, L2  |
| 3          | Expand the periodic function by using Fourier series for real life problems and complex engineering problems.                                 | L1, L2, L3  |
| 4          | Find orthogonal trajectories and analytic function by using basic concepts of complex variable theory.  | L1, L2, L3  |
| 5          | Apply the concept of Correlation and Regression to the engineering problems in data science, machine learning and AI.                         | L2, L3  |
| 6          | Illustrate understanding of the concepts of probability and expectation for getting the spread of the data and distribution of probabilities. | L1, L2  |

#### **DETAILED SYLLABUS:**

#### Term Work:

General Instructions:

- 1. Students must be encouraged to write at least 6 class tutorials on the entire syllabus.
- 2. A group of 4-6 students should be assigned a self-learning topic. Students should prepare a presentation/problem solving of 10-15 15minutes. This should be considered as a mini project in

Applied Mathematics. This project should be graded for 10 marks depending on the performance of the students.

The distribution of Term Work marks will be as follows-

| 1 | Attendance (Theory and Tutorial)   | 05marks |
|---|------------------------------------|---------|
| 2 | Class Tutorials on entire syllabus | 10marks |
| 3 | Mini project                       | 10marks |

#### Assessment:

#### Internal Assessment Test (IAT) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

#### **End Semester Theory Examination:**

#### Question paper format

- Question Paper will comprise a total of **six questions each carrying 15 marks Q.1** will be **compulsory** and should **cover the maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered.

**<u>Course Objective:</u>** Students will able to learn:

| Sr. No. | Course Objectives  |
|---------|--|
| 1       | To learn mathematical background for analysis of algorithm |
| 2       | To learn various advanced data structures.                 |
| 3       | To learn greed approach to solve problems.                 |
| 4       | To learn backtracking algorithm and maximum flow networks. |
| 5       | To learn dynamic programming methods.                      |
| 6       | To understand the concept of pattern matching.             |

#### **Course Outcomes:**

On successful completion, of course, learner/student will be able to:

| Sr.No. | Course Outcomes   | Cognitive Levels of<br>Attainment as per<br>Bloom's Taxonomy |
|--------|---|--|
| 1      | Understand methods for analysis of algorithms and solve recurrence problems.                  | L1, L2   |
| 2      | Choose appropriate advanced data structures for a given problem and calculate its complexity. | L2, L3, L4   |
| 3      | Analyze the greedy programming technique to solve problems.                                   | L2, L3, L4, L5   |
| 4      | Evaluate and analyze the backtracking algorithm and understand maximum flow networks.         | L2, L3, L4, L5   |
| 5      | Analyze the dynamic programming technique to solve problems.                                  | L2, L3, L4, L5   |
| 6      | Select a proper pattern matching algorithm for a given problem.                               | L3, L4, L5   |

#### **Detailed Syllabus:**

| Sr. | Name of        | Detailed Content  |    | СО       |
|-----|----------------|---|----|----------|
| No. | Module         |   |    | Mappings |
| 0   | Prerequisite   | Overview of Data Structures: Revision of basic data structures (arrays, | 01 |          |
|     |                | stacks, queues, linked lists, trees).                                   |    |          |
| Ι   | Introduction   | Fundamentals of the analysis of algorithms: Time and Space              | 03 | CO1      |
|     | to Analysis of | complexity, Asymptotic notation, Recurrence Relations: Methods          |    |          |
|     | Algorithms     | to solve recurrence relations in algorithms (Substitution, Recursion    |    |          |
|     |                | tree, Master theorem).  |    |          |

#### Assessment:

#### Internal Assessment Test (IAT) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

#### **End Semester Theory Examination:**

#### Question paper format

- Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered.

#### **<u>Course Objective:</u>** Students will be able to learn:

| Sr. No. | Course Objectives   |
|---------|---|
| 1       | To learn the basics and understand the need for database management systems for |
|         | real-world applications.  |
| 2       | To construct a conceptual data model for real-world applications                |
| 3       | To Build a Relational Model from ER/EER.  |
| 4       | To introduce the concept of SQL to store and retrieve data efficiently.         |
| 5       | To demonstrate notions of normalization for database design.                    |
| 6       | To understand the concepts of transaction processing- concurrency               |
|         | control & recovery procedures.  |

#### Course Outcomes:

On successful completion, of course, learner/student will be able to:

| Sr.No. | Course Outcomes   | Cognitive Levels of<br>Attainment as per<br>Bloom's Taxonomy |
|--------|---|--|
| 1      | Identify the need of Database Management System.                  | L1, L2   |
| 2      | Design conceptual model for real life applications.               | L6   |
| 3      | Create Relational Model for real life applications                | L6   |
| 4      | Formulate query using SQL commands.                               | L3   |
| 5      | Apply the concept of normalization to relational database design. | L3   |
| 6      | Demonstrate the concept of transaction, concurrency and recovery. | L2   |

#### Assessment:

#### Internal Assessment Test (IAT) for 20 marks each:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

#### **End Semester Theory Examination:**

- Question paper format
- Question Paper will comprise a total of six questions each carrying 15 marks Q.1 will be compulsory and should cover the maximum contents of the syllabus
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered.

#### **Course Objectives:** Students will able to learn:

| Sr. No. | Course Objectives  |
|---------|--|
| 1       | To learn fundamentals of Regular and Context Free Grammars and Languages.                  |
| 2       | To understand the relation between Regular Language and Finite Automata and machines.      |
| 3       | To learn how to design Automata's as Acceptors, Verifiers and Translators.                 |
| 4       | To understand the relation between Regular Languages, Contexts free Languages, PDA and TM. |
| 5       | To learn how to design PDA as acceptor and TM as Calculators.                              |
| 6       | To learn applications of Automata Theory.  |

#### **Course Outcomes:**

| Sr.<br>No. | Course Outcomes  | Cognitive levels of<br>attainment as per<br>Bloom's<br>Taxonomy |
|------------|--|---|
| On succ    | essful completion, of course, learner/student will be able to:                   |   |
| 1          | Explain, analyze and design Regular languages, Expression and Grammars.          | L2, L4, L6  |
| 2          | Design different types of Finite Automata and Machines as Acceptor, Verifier and | L6  |
|            | Translator.  |   |
| 3          | Analyze and design Context Free languages and Grammars.                          | L4, L6  |
| 4          | Design different types of Push down Automata as Simple Parser.                   | L6  |
| 5          | Design different types of Turing Machines as Acceptor, Verifier, Translator and  | L6  |
|            | Basic computing machine.   |   |
| 6          | Develop understanding of applications of various Automata.                       | L6  |

Prerequisite: Basic Mathematical Fundamentals: Sets, Logic, Relations, Functions.

#### **DETAILED SYLLABUS:**

Assessment: Internal Assessment Test (IAT) for 20 marks each: • IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of the syllabus content must be covered in the IAT-I and the remaining 40% to 50% of the syllabus content must be covered in the IAT-II.

#### **End Semester Theory Examination:**

- Question paper format
- Question Paper will comprise a total of **six questions each carrying 15 marks Q.1** will be **compulsory** and should **cover the maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **four questions** need to be answered.

#### Lab Objective: The course aims to

| Sr. No | Lab Objectives   |
|--------|--|
| 1      | To learn mathematical background for analysis of algorithm |
| 2      | To learn various advanced data structures.                 |
| 3      | To learn greed approach to solve problems.                 |
| 4      | To learn backtracking algorithm and maximum flow networks. |
| 5      | To learn dynamic programming methods.                      |
| 6      | To understand the concept of pattern matching.             |

#### **Lab Outcomes:** Upon completion of the course students will be able to:

| Sr. No. | Lab Outcomes  | Cognitive Levels<br>of Attainment as<br>per Bloom's<br>Taxonomy |
|---------|---|---|
| 1       | Understand methods for analysis of algorithms and solve recurrence problems.                  | L1, L2  |
| 2       | Choose appropriate advanced data structures for a given problem and calculate its complexity. | L2, L3, L4  |
| 3       | Analyze the greedy programming technique to solve problems.                                   | L2, L3, L4, L5  |
| 4       | Evaluate and analyze the backtracking algorithm and understand maximum flow networks.         | L2, L3, L4, L5  |
| 5       | Analyze the dynamic programming technique to solve problems.                                  | L2, L3, L4, L5  |
| 6       | Select a proper pattern matching algorithm for a given problem.                               | L3, L4, L5  |

#### Hardware & Software Requirements:

| Hardware Requirement:     | Software requirement:    |
|---------------------------|--------------------------|
| PC i3 processor and above | Turbo/Borland C complier |

#### **DETAILED SYLLABUS:**

| Sr.<br>No. | Name of Module                               | Suggested list of Practical  | Hours | LO<br>Mappings |
|------------|--|--|-------|----------------|

#### Assessment :

**Term Work:** Term work shall consist of at least 10-12 practical's based on above list. Also Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

Practical & Oral Exam: An Oral & Practical exam will be held based on Practicals.

| Course<br>Code | Course Name | Teac<br>(Co | hing Sche<br>ntact Hou | eme<br>rs) | Credits Assigned |        |      |       |

#### Lab Objective: The course aims to

| Sr. No | Lab Objectives   |
|--------|--|
| 1      | To identify and define problem statements for real life applications.                            |
| 2      | To construct conceptual data model for real life applications.                                   |
| 3      | To Build Relational Model from ER/EER and demonstrate usage of relational algebra.               |
| 4      | To Apply SQL to store and retrieve data efficiently.   |
| 5      | To implement database connectivity using JDBC.   |
| 6      | To understand the concepts of transaction processing- concurrency control & recovery procedures. |

#### <u>Lab Outcomes:</u> Upon completion of the course, students will be able to:

| Sr. No. | Lab Outcomes   | Cognitive Levels<br>of Attainment as<br>per Bloom's<br>Taxonomy |  |  |
|---------|--|---|--|--|
| 1       | Define problem statement and Construct the conceptual model for real life application. | L1, L3, L4, L6  |  |  |
| 2       | Create and populate a RDBMS using SQL.   | L3, L4  |  |  |
| 3       | Formulate and write SQL queries for efficient information retrieval                    | L3, L4  |  |  |
| 4       | Apply view, triggers and procedures to demonstrate specific event handling.            | L1, L3, L4  |  |  |
| 5       | Demonstrate database connectivity using JDBC.  | L3  |  |  |
| 6       | Demonstrate the concept of concurrent transactions.                                    | L3, L4  |  |  |

**Prerequisite:** C and Python Programming.

#### Hardware & Software Requirements:

| Hardware Requirement:     | Software requirement:                                 |
|---------------------------|---|
| PC i3 processor and above | Any SQL Compiler, Python/Java Programming<br>Language |

#### **DETAILED SYLLABUS:**

| Sr.<br>No. | Experiment List   | Hours | LO Mapping |
|------------|---|-------|------------|
| 1.         | Identify real world problem and develop the problem statement. Design an Entity-Relationship (ER) / Extended Entity-Relationship (EER) Model. | 02    | LOI        |
| 2.         | Mapping ER/EER to Relational schema model.  | 02    | LO1        |
| 3.         | Create a database using DDL and apply integrity constraints.  | 02    | LO2, LO3   |
| 4.         | Perform data manipulations operations on populated database.  | 02    | LO3        |
| 5.         | Perform Authorization using Grant and Revoke.   | 02    | LO2, LO3   |
| 6.         | Implement Basic and complex SQL queries.  | 02    | LO3, LO4   |
| 7.         | Implementation of Views and Triggers.   | 02    | LO4        |
| 8.         | Demonstrate database connectivity using JDBC.   | 02    | LO5        |
| 9.         | Execute TCL commands.   | 02    | LO4        |
| 10.        | Implement functions and procedures in SQL   | 02    | LO3, LO4   |
| 11.        | Implementation of Cursor.   | 03    | LO3, LO4   |
| 12.        | Implementation and demonstration of Transaction and Concurrency control techniques using locks.   | 03    | LO6        |

Note: Guidelines for the conduction of practical.

- Faculty will assign one real-world case study or application to a group of 3 students, and each group is to perform the above list of experiments and then apply to their assigned case study or application.
- Learner must prepare a Journal of the above experiment list along with a report of their assigned case study/application.

#### **Rationale:**

Concepts in Statistics and Operation Research have wide applications in various fields of Engineering. Hence, they are included in the syllabus to help students understand how to apply them in practical applications.

#### Course Objectives:

The course aims:

- 1. To study Matrix algebra and its application in engineering problems.
- **2.** To study Contour integrals and expansion of complex valued function in a power series.
- 3. To study Z-Transforms and Inverse Z-Transforms with its properties.
- 4. To study the concepts of probability distributions and sampling theory.
- 5. To study and apply Linear programming Techniques to solve the optimization Problems.
- 6. To study and apply Non-Linear programming Techniques to solve the optimization problems.

#### Course Outcomes:

| Sr.<br>No. | Course Outcomes   | Cognitive levelsof<br>attainment asper<br>Bloom's<br>Taxonomy |
|------------|---|---|
| On suc     | ccessful completion, of course, learner/student will be able to:  |   |
| 1          | Apply the concepts of eigenvalues and eigen vectors to solve engineering problems.  | L1, L2  |
| 2          | Apply the use of concepts of Complex Integration for evaluating integrals, computing residues & evaluate various contour integrals. | L1, L2  |
| 3          | Apply the concept of Z- transformation and its inverse in engineering problems.   | L1, L2, L3  |
| 4          | Apply the concept of probability distribution to engineering problems & testing hypothesis of small samples using sampling theory.  | L1, L2, L3  |
| 5          | Apply the concept of Linear Programming to solve the optimization problems.   | L2, L3  |
| 6          | Apply the concept of Non-Linear Programming to solve the optimization problems.   | L1, L2, L3  |

Prerequisite: Applied Mathematics-I, Applied Mathematics-II, Applied Mathematics Thinking-I.

#### **DETAILED SYLLABUS:**

#### Course Objectives:

Students will able to learn:

- 1) To understand the components of Operating System &its functions.
- 2) To introduce the concept of a process and process management.
- 3) To understand basic concepts related to Inter-process Communication (IPC) like race condition, mutual exclusion, deadlock, etc. and role of an Operating System in IPC.
- 4) To understand the concepts and implementation of memory management policies and virtual memory.
- 5) To understand functions of Operating System for storage management and device management.
- 6) To study the need and fundamentals of special-purpose operating system with the advent of new emerging technologies.

#### **Course Outcomes:**

Upon completion of the course, students will be able to:

| Sr.<br>No. | Course Outcomes  | Cognitive levels<br>ofattainment as<br>per Bloom's<br>Taxonomy |
|------------|--|--|
| 1          | Define operating systems & understand the objective of an OS & its functions.                          | L1, L2   |
| 2          | Describe the Process, PCB & compare various process scheduling algorithms.                             | L1, L2, L3, L4,<br>L5  |
| 3          | Evaluate the requirement for process synchronization and coordination handled by the operating system. | L2, L3, L4, L5   |
| 4          | Describe and analyze memory management, its allocation policies, and virtual memory.                   | L2, L3, L4, L5   |
| 5          | Analyze and evaluate the services provided by the Operating System for storage management.             | L2, L3, L4, L5   |
| 6          | Compare the functions of various special-purpose Operating Systems.                                    | L1, L2   |

Prerequisite: Programming language (C & Python).

#### **Rationale:**

In today's modern world, computer networks serve as the foundation for effective data transfer, facilitating communication through email, messaging, file sharing, video calls, and streaming etc. They also allow devices to share resources such as printers, copiers, and fax machines, leading to significant cost savings. The principles of network design are relevant across various settings, from small businesses to large corporations, highlighting the versatility and importance of this knowledge. As a result, a solid understanding of computer networks is essential for anyone aspiring to work in IT, cybersecurity, or software development.

#### **Course Objectives:**

Students will be able to learn:

| Sr. | Course Objectives   |
|-----|---|
| No. |   |
| 1.  | Study the functionalities of each layer of the OSI and TCP/IP models.   |
| 2.  | Acquire knowledge of different types of transmission media.   |
| 3.  | Acquire the knowledge of data link layer concepts and their protocols for node-to-node delivery of data.                                |
| 4.  | Analyze the strengths and weaknesses of routing protocols and gain knowledge about IP addressing.                                       |
| 5.  | Study the data transportation and session management issues and related protocols used for end-to-end                                   |
|     | delivery of data.   |
| 6.  | Gain the knowledge of data presentation techniques used in the presentation layer & client/server model in application layer protocols. |

#### **Course Outcomes:**

On successful completion, of course, the learner/student will be able to:

| Sr.  | Course Outcomes  | Cognitive levels |
|------|--|------------------|
| No.  |  | ofattainment as  |
|      |  | per Bloom's      |
|      |  | Taxonomy         |
| CO1: | Explain the functionalities of different layers of the OSI & TCP/IP models and compare   | L1, L2           |
|      | the models.  |                  |
| CO2: | Categorize the types of transmission media.  | L1, L2           |
| CO3: | Explain data link layer concepts, design issues, and protocols.                          | L1, L2, L3       |
| CO4: | Analyze the network and select an appropriate routing strategy / addressing scheme to    | L1, L2, L3       |
|      | design a network for an organization.  |                  |
| CO5: | Describe the mechanisms and related protocols used for end-to-end delivery of data.      | L1, L2, L3       |
| CO6: | Implement compression strategies for the application in hand and establish client-server | L1, L2, L3       |
|      | model.   |                  |

#### **DETAILED SYLLABUS:**

#### Assessment:

#### Internal Assessment (IA) for 20 marks:

• IA will consist of Two Compulsory Internal Assessment Tests. Approximately 40% to 50% of syllabus content must be covered in First IA Test and remaining 40% to 50% of syllabus content must be covered in Second IA Test

#### Question paper format

- Question Paper will comprise of a total of **six questions each carrying 15 marks. Q.1** will be **compulsory** and should **cover maximum contents of the syllabus**
- **Remaining questions** will be **mixed in nature** (part (a) and part (b) of each question must be from different modules. For example, if Q.2 has part (a) from Module 3 then part (b) must be from any other Module randomly selected from all the modules)
- A total of **Four questions** needs to be answered.

#### Lab Objectives:

Students will be able to learn:

| Sr. No.                   | Lab Objectives  |  |  |
|---------------------------|---|--|--|
| The Lab experiments aims: |   |  |  |
| 1                         | To understand architecture and installation of Unix Operating System              |  |  |
| 2                         | To learn Unix general purpose commands and programming in Unix editor environment |  |  |
| 3                         | To understand file system management and user management commands in Unix.        |  |  |
| 4                         | To understand process management and memory management commands in Unix           |  |  |
| 5                         | To learn basic shell scripting.   |  |  |
| 6                         | To learn scripting using awk and perl languages.                                  |  |  |

#### Lab Outcomes:

| Sr.<br>No. | Lab Outcomes  | Cognitive levels of<br>attainment as per<br>Bloom's<br>Taxonomy |
|------------|---|---|
| On succ    | essful completion, of course, learner/student will be able to:            |   |
| 1          | Understand the architecture and functioning of Unix                       | L1, L2  |
| 2          | Identify the Unix general purpose commands                                | L4  |
| 3          | Apply Unix commands for system administrative tasks such as file system   | L3  |
|            | management and user management.   |   |
| 4          | Execute Unix commands for system administrative tasks such as process     | L4  |
|            | management and memory management  |   |
| 5          | Implement basic shell scripts for different applications.                 | L3  |
| 6          | Implement advanced scripts using awk & perl languages and grep, sed, etc. | L3  |
|            | commands for performing various tasks.                                    |   |

#### Prerequisite: Programming Language C

#### Hardware & Software Requirements:

| Hardware Requirement:     | Software requirement:                              |
|---------------------------|--|
| PC i3 processor and above | Unix, Editor, Bash shell, Bourne shell and C shell |

#### Assessment :

**Term Work:** Term work shall consist of at least 10-12 practical's based on above list. Also Term work Journal must include at least 2 assignments.

Term Work Marks: 25 Marks (Total marks) = 15 Marks (Experiment) + 5 Marks (Assignments) + 5 Marks (Attendance)

#### Practical & Oral Exam: An Oral & Practical exam will be held based on Practicals.

#### Lab Objectives:

| Sr. No. | Lab Objectives   |  |  |  |  |  |  |
|---------|--|--|--|--|--|--|--|
| The Lab | The Lab experiments aims:  |  |  |  |  |  |  |
| 1       | To get familiar with the basic network administration commands                       |  |  |  |  |  |  |
| 2       | To install and configure network simulator and learn basics of TCL scripting.        |  |  |  |  |  |  |
| 3       | To understand the network simulator environment and visualize a network topology and |  |  |  |  |  |  |
|         | observe its performance  |  |  |  |  |  |  |
| 4       | To implement client-server socket programs.  |  |  |  |  |  |  |
| 5       | To observe and study the traffic flow and the contents of protocol frames.           |  |  |  |  |  |  |
| 6       | To design and configure a network for an organization                                |  |  |  |  |  |  |

#### Lab Outcomes:

| Sr.<br>No. | Lab Outcomes   | Cognitive levels<br>of attainment as<br>per Bloom's<br>Taxonomy |
|------------|--|---|
| On suc     | cessful completion, of course, the learner/student will be able to:        |   |
| 1          | Execute and evaluate network administration commands and demonstrate their | L3, L5  |
|            | use in different network scenarios   |   |
| 2          | Demonstrate the installation and configuration of the network simulator.   | L1, L2  |
| 3          | Demonstrate and measure different network scenarios and their performance  | L1, L2  |
|            | behavior.  |   |
| 4          | Implement the socket programming for client-server architecture.           | L3  |
| 5          | Analyze the traffic flow of in TCP/IP protocols.                           | L4  |
| 6          | Design a network for an organization using a network design tool.          | L6  |

**Prerequisite:** C /Python programming. Basic commands of Windows and Linux operating systems.

#### Hardware & Software Requirements:

| Hardware Requirement:     | Software requirement:  |
|---------------------------|--|
| PC i3 processor and above | NS2.34 or higher version, Protocol Analyzer (e.g.,<br>Wireshark),<br>C/Java/python |

#### Lab Objectives:

- 1. **Understand** the fundamental concepts of different programming paradigms—including Imperative, Declarative, Procedural, Object-Oriented, Functional, Event-Driven, and Logic programming—and **explain** core language design elements such as names, scopes, bindings, type systems, and memory management.
- 2. Analyze the strengths, limitations, and best practices of each programming paradigm, evaluating their suitability for solving a diverse range of computational problems.
- 3. **Apply** the most appropriate programming paradigms to **develop** efficient software solutions, tailoring these solutions to specific problem domains while ensuring performance, modularity, and scalability.
- 4. **Integrate** object-oriented programming principles, functional programming techniques, and concurrent programming strategies to **design** real-world applications that are robust, maintainable, and efficient.
- 5. **Implement** logic programming techniques to **solve** declarative problem-solving tasks in areas such as knowledge-based systems, automated reasoning, and artificial intelligence, specifically using languages like Prolog.
- 6. **Create** scalable and high-performance software architectures by **architecting** solutions that leverage modern design patterns, concurrency models, and advanced programming techniques aligned with real-world needs.

#### Lab Outcomes:

- 1. Students will **identify** and **compare** various programming paradigms and their core language design concepts, including names, scopes, bindings, and type systems.
- 2. Students will **develop and implement** imperative and procedural programming solutions, demonstrating control flow, structured programming, and parameter-passing techniques in languages such as C and Dart.
- 3. Students will **apply** object-oriented principles, including inheritance, polymorphism, and encapsulation, to **design** software solutions. They will also **analyze** the use of advanced OOP techniques such as interfaces, abstract classes, and exception handling in Java and C++.
- 4. Students will **understand** functional programming concepts such as pure functions, lambda calculus, and higher-order functions, and **apply** them to design declarative programs in Haskell.
- 5. Students will **evaluate** logic programming paradigms and **apply** them to solve complex declarative problems, using Prolog to create rules, facts, and queries, with a focus on goal-oriented execution and resolution strategies.

6. Apply and Create: Students will apply concurrency concepts, including multithreading and synchronization, and create event-driven systems using languages like Java and Dart. They will also develop scalable solutions to avoid race conditions, deadlocks, and ensure high performance.

#### Hardware & Software Requirements:

#### Prerequisite: DETAILED SYLLABUS

| Sr.<br>No. | Module  | Detailed Content  | Hours | CO<br>Mapping |
|------------|---|---|-------|---------------|
| 0          | Prerequisite  | Compilation and interpretation, Focus on overview of compilation steps.   | 1     | _             |
| 1          | Introduction to<br>Programming<br>Paradigms and<br>Core Language<br>Design Concepts | <ul> <li>Introduction to different programming paradigms. Key Paradigms: Imperative, Declarative, Procedural, Object-Oriented, Functional, Event-Driven, and Logic programming</li> <li>Names, Scopes, and Bindings, Scope Rules, Storage Management.</li> <li>Type Systems, Type Checking, Equality Testing and Assignment.</li> <li>Self Study Topics: Study of different programming styles in Dart, Python, and Scala</li> </ul>  | 5     | CO 1          |
| 2          | Imperative and<br>Procedural<br>Paradigm  | <ul> <li>Imperative Programming: Core concepts like variables, data types, control flow abstractions (loops, conditionals).</li> <li>Procedural Programming: Structuring code using procedures, subroutines, and functions. Parameter passing methods - pass by value, pass by address, pass by reference.</li> <li>Structured Programming: Emphasizing modularity, code readability, and scope management.</li> <li>Languages: C, Dart</li> <li>Self-Study Topics: Exploring programming implementations to understand the use of Generic subroutines, Modules, Coroutines and Event handling</li> </ul> | 4     | CO 2          |

#### **Guidelines for Capstone Mini-Project**

- Students shall form a group of 3 to 4 students, and a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do the survey and identify needs, which shall be converted into a problem statement for the mini project in consultation with the faculty supervisor/head of department/internal committee of faculty.
- Students' hall submits an implementation plan in the form of a Gantt/PERT/CPM chart, which will cover the weekly activity of a mini-project.
- A log book to be prepared by each group, wherein the group can record weekly work progress, and the guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during the mini project activity; however, focus shall be on self-learning.
- Students in a group shall understand the problem effectively, propose multiple solutions, and select the best possible solution in consultation with the guide/ supervisor.
- Students shall convert the best solution into a working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and a report to be compiled in a standard format of the University of Mumbai.

#### Guidelines for Assessment of Capstone Mini-Project:

#### Term Work

- The review/ progress monitoring committee shall be constituted by the head of departments of each institute. The progress of the mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment, focus shall also be on each individual student, assessment based on the individual's contribution in group activity, their understanding, and response to questions.
  - Distribution of Term work marks for both semesters shall be as below;
    - Marks awarded by guide/supervisor based on above practical list and assignment completed by the students

- Marks awarded by guide/supervisor for Capstone Project Completion: :10
- Quality of Project report & Project Review

## Review/progress monitoring committee may consider following points for assessment based of the semester project as mentioned in general guidelines.

05

- In this case in students' group shall complete project in all aspects including,
  - Identification of need/problem
  - Proposed final solution
  - o Procurement of components/systems
  - Building prototype and testing
  - Two reviews will be conducted for continuous assessment,
    - First shall be for the finalisation of problem and proposed solution
    - Second shall be for the implementation, testing and validation of solution.

#### Assessment criteria of Capstone Mini-Project.

Capstone Mini-Project shall be assessed based on following criteria;

- 1. Quality of survey/ need identification
- 2. Clarity of Problem definition based on need.
- 3. Innovativeness in solutions/ Novelty in solutions.
- 4. Feasibility of proposed problem solutions and selection of best solution
- 5. Collection of Dataset.
- 6. Cost effectiveness
- 7. Societal impact
- 8. Innovativeness
- 9. Cost effectiveness and Societal impact
- 10. Full functioning of working model as per stated requirements
- 11. Effective use of skill sets
- 12. Effective use of standard engineering norms
- 13. Contribution of an individual's as member or leader
- 14. Clarity in written and oral communication

#### Guidelines for Assessment of Capstone Mini-Project Practical/Oral Examination:

- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organisations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

| 1. Object-Oriented Programming (OOP)  |
|---|
| a. Library Management System  |
| • Use classes for Books, Users, Transactions.   |
| • Implement inheritance for different types of users (students, staff).   |
| Optional: Add GUI using Tkinter or JavaFX.  |
| b. Online Food Ordering System (Console-based)  |
| Classes: Customer, MenuItem, Order, Restaurant  |
| OOP features like encapsulation, polymorphism.  |
| c. Expense Tracker App (Java or Python)   |
| Use OOP to model Users, Transactions, and Categories.   |
| 2. Functional Programming   |
| a. Weather Data Analyzer (Haskell / Python with functools)  |
| • Read weather data and apply pure functions for analysis.  |
| • Avoid mutable data.   |
| • Use map, reduce, filter extensively.  |
| b. To-Do List Manager (Scala or Elixir)   |
| • Immutable data structures   |
| • Recursion instead of loops  |
| • No side effects in logic layer.   |
| 3. Procedural Programming   |
| a. Student Grade Calculator (C / Python)  |
| • Use functions and data structures to store and compute data.  |
| • No OOP involved.  |
| b. ATM Simulator  |
| • Menu-based system using functions only (no classes)   |
| <ul> <li>PIN check, balance enquiry, cash withdrawal, etc.</li> </ul>   |
| 4 Logic Programming   |
| a. Family Tree Generator (Prolog)   |
| <ul> <li>Define relations like parent sibling cousin using rules</li> </ul>   |
| <ul> <li>Duery relationships dynamically</li> </ul>   |
| b Sudaku Salver (Pralog)  |
| • Define rules and constraints to solve 9x9 Sudoku puzzle   |
| 5 Multi Paradigm Approach   |
| o. Chathat using Python (OOP + Functional)  |
| a. Charbot using 1 ytholi (OOI + Functional)  |
| <ul> <li>Got for structuring code (Oser, Bot, Chatsession).</li> <li>Eunctional for processing input (filters, parsers).</li> </ul> |
| • Functional for processing input (inters, parsers).  |
| <b>D. File Organizer Script</b>   |
| • Script to organize riles into folders based on type.<br>Use precedural logic + OOP for file operations                            |
| • Use procedural logic + OOP for the operations.  |
| 6. Event-Driven Programming   |
| a. GUI Calculator (Python 1 kinter / Java Swing)  |
| • Event insteners for button presses.   |
| • Follow IVIV Dattern optionally.   |
| <b>b.</b> Traffic Light Simulation (JavaScript + HTML/CSS)  |
| • Events for light changes  |
| Use state variables to track behavior   |

#### Assessment :

**Term Work:** Term Work shall consist of list of all practicals' based on the above list. Also, the Term work Journal must include at least 2 assignments and Mini-Project Report.

**Term Work Marks:** 50 Marks (Total marks) = 10 Marks (Experiment) + 5 Marks (Assignments) + 30 Marks (Capstone Mini- Project with full prototype/ product demo, testing, validation and Report) + 5 Marks (Attendance).

#### Oral Exam: An Oral exam will be held based on the Capstone Mini-Project.

#### Lab Objectives:

| Sr. No.   | Lab Objectives   |  |  |  |  |
|-----------|--|--|--|--|--|
| The Lab e | The Lab experiments aims:  |  |  |  |  |
| 1         | To set up development environments for Java full-stack projects. |  |  |  |  |
| 2         | To develop a web interface using front-end technologies.         |  |  |  |  |
| 3         | To build RESTful web services using Spring Boot.                 |  |  |  |  |
| 4         | To implement database CRUD operations using Hibernate/JPA.       |  |  |  |  |
| 5         | To integrate front-end and back-end applications.                |  |  |  |  |
| 6         | To deploy the application and present the capstone project.      |  |  |  |  |

#### Lab Outcomes:

| Sr.<br>No.  | Lab Outcomes  | Cognitive levels<br>of attainment as<br>per Bloom's<br>Taxonomy |  |
|---|---|---|--|
| On successful completion, of course, the learner/student will be able to: |   |   |  |
| 1   | Setup and configure full-stack Java development environment.          | L1, L2  |  |
| 2   | Develop responsive user interfaces with HTML, CSS, and React.js.      | L1, L2, L3  |  |
| 3   | Create RESTful APIs using Spring Boot framework.                      | L1, L2, L3  |  |
| 4   | Perform CRUD operations with MySQL database integration.              | L1, L2, L3, L4  |  |
| 5   | Integrate front-end and back-end with secure API endpoints.           | L1, L2, L3, L4  |  |
| 6   | Deploy full-stack application on cloud platform and present capstone. | L1, L2, L3, L4,   |  |
|   |   | L5, L6  |  |

Prerequisite: C /Python programming. Basic commands of Windows and Linux operating systems.

Hardware & Software Requirements:

| Hardware Requirement:  | Software requirement:  |
|--|--|
| PC i3 processor and above. 8GB RAM (minimum), 16GB recommended, 256GB SSD recommended, Stable internet connection. | JDK 17+, IntelliJ IDEA / Eclipse, VS Code, MySQL /<br>MongoDB, Postman, Git, GitHub, Spring Boot, Angular<br>CLI., Node.js & npm (for frontend React.js)AWS / Heroku<br>Account for Deployment |

#### **DETAILED SYLLABUS:**

| V  | Full Stack<br>Integration | Connecting React frontend with Spring Boot backend- Overview of<br>frontend-backend communication in full-stack applications, Setting<br>up React app (Vite/CRA), Axios or Fetch API for making HTTP<br>requests, Configuring CORS in Spring Boot for cross-origin access,<br>Calling Spring Boot REST API from React components, Handling<br>API responses in React (state management with useState/useEffect),<br>API testing (Postman)- Introduction to Postman and its features,<br>Creating API collections in Postman, Sending GET, POST, PUT,<br>DELETE requests, Testing APIs with different payloads, Setting up<br>environment variables in Postman, Automating tests with Postman<br>scripts (basics), Error handling- Backend: Handling exceptions using<br>@ControllerAdvice and @ExceptionHandler, Sending structured<br>error responses (HTTP status codes, error messages, timestamps),<br>Frontend: Handling API errors in React using try-catch and Axios<br>interceptors, Displaying error messages to users in the React UI,<br>Logging errors for debugging and maintenance, JWT for<br>authentication- What is JWT? Structure of JWT: Header, Payload,<br>Signature, Stateless authentication vs. session-based, Generating<br>JWTs in Spring Boot, Validating and parsing JWTs, Security<br>configuration using Spring Security, Storing JWT securely<br>(localStorage/sessionStorage), Securing Frontend & Backend with<br>JWT- Adding Authorization header in API requests from React,<br>Protecting backend endpoints using JWT authorization, Role-based<br>access control (RBAC) basics, Frontend: Securing routes and<br>redirecting unauthenticated users, Refresh token strategy (basic | 05 | L04, L05 |

|    |                                     | concept).<br>Self-Learning Topics: Students can secure full-stack applications with JWT, protect API endpoints, and manage authentication flow.  |    |     |
|----|-------------------------------------|--|----|-----|
| VI | Deployment<br>& Capstone<br>Project | <ul> <li>Docker basics- what is Docker? Containers vs. Virtual Machines, Docker architecture: Images, Containers, Docker Daemon, Docker Hub, Setting up Docker environment, Writing Dockerfile: Basic syntax, Creating images for Java and Node.js applications, Docker commands:docker build, docker run, docker ps, docker stop, docker rm, docker exec, Managing Docker images and containers, Overview of docker-compose (introductory level), Deploying Spring Boot application-Creating Dockerfile for Spring Boot, Multi-stage builds for optimized Docker images, Exposing application port using EXPOSE, Environment variables and configuration management, Building and running Spring Boot Docker container, Accessing REST API from a containerized Spring Boot app, Hosting React application-Building React app for production (npm run build), Serving static files using NGINX or simple Node.js server, Writing Dockerfile for React application, Connecting React container to Spring Boot container, Basics of Docker networking (docker network create), Running both containers simultaneously using docker-compose, Capstone project implementation &amp; presentation-Finalizing capstone project scope: features, architecture, roles, Implementing core functionalities (CRUD operations, authentication, API integration), Containerizing and deploying complete full-stack application, Preparing project documentation and presentation slides, Presenting project flow: architecture diagram, tech stack, demo.</li> </ul> | 04 | LO6 |

#### **Textbooks:**

- 1. "Spring in Action" by Craig Walls

- By Boot and By Charge Wands
   "Pro Spring Boot 3" by Felipe Gutierrez
   "React Up & Running" by Stoyan Stefanov
   "Java: The Complete Reference" by Herbert Schildt

#### **Reference Books:**

- 1. "Full Stack Development with Spring Boot and React" by Juha Hinkula
- 2. "Building Java Programs" by Stuart Reges, Marty Stepp

#### **Online Resources:**

| Sr. No. | Website Name  |
|---------|---|
| 1.      | Spring Boot Official Documentation — <u>https://spring.io/projects/spring-boot</u>  |
| 2.      | React.js Official Documentation — <u>https://react.dev/</u>                         |
| 3.      | FreeCodeCamp Full Stack JavaScript Tutorials — <u>https://www.freecodecamp.org/</u> |
| 4.      | Docker Documentation — <u>https://docs.docker.com/</u>                              |
| 5.      | MySQL Documentation — <u>https://dev.mysql.com/doc/</u>                             |
| 6.      | Postman Learning Center — <u>https://learning.postman.com/</u>                      |
| 7.      | Spring Initializr ( <u>https://start.spring.io/</u> )                               |

#### List of Experiments.

| Sr No | List of Experiments  | Hrs |  |  |
|-------|--|-----|--|--|
| 01    | Setup Java, Spring Boot, and React development environment.        | 01  |  |  |
| 02    | Develop a static web page using HTML, CSS, and Bootstrap.          |     |  |  |
| 03    | Build a dynamic front-end using React.js with API calls.           | 04  |  |  |
| 04    | Develop a RESTful web service using Spring Boot.                   | 02  |  |  |
| 05    | Integrate MySQL database with Spring Boot application.             | 02  |  |  |
| 06    | Implement JWT authentication in a Spring Boot application.         | 04  |  |  |
| 07    | Connect React front-end with Spring Boot backend APIs.             | 04  |  |  |
| 08    | Deploy the application using Docker and GitHub.                    | 06  |  |  |
| Sr No | List of Assignments  | Hrs |  |  |
| 01    | Create a personal portfolio website using HTML, CSS, and React.    | 02  |  |  |
| 02    | Develop a basic CRUD API using Spring Boot.                        | 02  |  |  |
| 03    | Implement a login and registration system with JWT.                | 02  |  |  |
| 04    | Perform database operations using JPA Repository.                  | 02  |  |  |
| 05    | Build a single-page application (SPA) with React.js.               | 02  |  |  |
| 06    | Deploy an integrated full-stack application on cloud/GitHub Pages. | 02  |  |  |

| Sr No | Capstone Mini- Project List (Sample Ideas)   |
|-------|--|
| 01    | E-commerce Web Application — Complete shopping system with admin dashboard.                      |
| 02    | <b>Online Library Management System</b> — For managing books, users, and borrowing transactions. |
| 03    | Job Portal Application — For job seekers and recruiters.   |
| 04    | Online Food Ordering System — With user authentication, menu, and payment gateway.               |
| 05    | Student Course Registration System — For colleges/universities.                                  |
| 06    | Event Management System — Event creation, management, ticket booking.                            |

#### Note:- Capstone Mini-Project Guidelines.

1. **Objective of the Capstone Mini-Project:-** The capstone Mini-Project aims to enable students to design, develop, deploy, and present a real-world full-stack application using the Java technology stack, applying concepts of frontend, backend, database management, RESTful APIs, containerization (Docker), security (JWT), and deployment practices.

Students will work in a group of 4 students teams to build a functional application that solves a specific problem or fulfills a business need.

- 2. Project Scope & Expectations:- Project Scale: Should involve at least 2–3 core modules (e.g., User Management, Dashboard, Reporting). Technology Stack: Frontend: React.js (with API integration), Backend: Spring Boot REST API, Database: MySQL with JPA/Hibernate, Security: JWT-based authentication, Deployment: Docker containers, optional Docker Compose, Integration: End-to-end integration between frontend, backend, and database. Testing: API testing with Postman; frontend and backend error handling. Documentation: Source code, design documentation, API documentation, and user manual. Presentation: Live demo, project report, and presentation slides.
- 3. Project Deliverables:- Project Proposal: Problem statement, Objectives, Project scope, Technology stack.Design Documentation: System architecture diagram (MVC, API flow), Database schema (ER diagram), UI wireframes/mockups, Implementation: Frontend and backend code repositories (GitHub or equivalent), RESTful API endpoints, JWT authentication and role-based access control, Containerized deployment with Docker, Testing:Test cases and screenshots (Postman / frontend validation), Final Report: Introduction, methodology, results, testing summary, and conclusion, Challenges faced and solutions applied, Future scope. Presentation: 8–10 minutes demo, Architecture explanation, Live application demo, Q&A session.

#### **Guidelines for Capstone Mini-Project**

- Students shall form a group of 3 to 4 students, and a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do the survey and identify needs, which shall be converted into a problem statement for the mini project in consultation with the faculty supervisor/head of department/internal committee of faculty.
- Students' hall submits an implementation plan in the form of a Gantt/PERT/CPM chart, which will cover the weekly activity of a mini-project.
- A log book to be prepared by each group, wherein the group can record weekly work progress, and the guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during the mini project activity; however, focus shall be on self-learning.
- Students in a group shall understand the problem effectively, propose multiple solutions, and select the best possible solution in consultation with the guide/ supervisor.
- Students shall convert the best solution into a working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and a report to be compiled in a standard format of the University of Mumbai.

#### **Guidelines for Assessment of Capstone Mini-Project:**

Term Work

- The review/ progress monitoring committee shall be constituted by the head of departments of each institute. The progress of the mini project to be evaluated on continuous basis, minimum two reviews in each semester.
- In continuous assessment, focus shall also be on each individual student, assessment based on the individual's contribution in group activity, their understanding, and response to questions.
- Distribution of Term work marks for both semesters shall be as below;
  - Marks awarded by guide/supervisor based on above practical list and assignment completed by the students
     10
  - Marks awarded by guide/supervisor for Capstone Project Completion: 10
  - Quality of Project report & Project Review
     05

## Review/progress monitoring committee may consider following points for assessment based of the semester project as mentioned in general guidelines.

- In this case in students' group shall complete project in all aspects including,
  - Identification of need/problem
  - Proposed final solution
  - Procurement of components/systems
  - Building prototype and testing
- Two reviews will be conducted for continuous assessment,
  - First shall be for the finalisation of problem and proposed solution
  - Second shall be for the implementation, testing and validation of solution.

#### Assessment criteria of Capstone Mini-Project.

Capstone Mini-Project shall be assessed based on following criteria;

- 1. Quality of survey/ need identification
- 2. Clarity of Problem definition based on need.
- 3. Innovativeness in solutions/ Novelty in solutions.
- 4. Feasibility of proposed problem solutions and selection of best solution
- 5. Collection of Dataset.
- 6. Cost effectiveness
- 7. Societal impact
- 8. Innovativeness

- 9. Cost effectiveness and Societal impact
- 10. Full functioning of working model as per stated requirements
- 11. Effective use of skill sets
- 12. Effective use of standard engineering norms
- 13. Contribution of an individual's as member or leader
- 14. Clarity in written and oral communication

#### Guidelines for Assessment of Capstone Mini-Project Practical/Oral Examination:

- Report should be prepared as per the guidelines issued by the University of Mumbai.
- Mini Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organisations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

#### Assessment :

**Term Work:** Term Work shall consist of list of all practicals' based on the above list. Also, the Term work Journal must include at least 2 assignments and Mini-Project Report.

**Term Work Marks:** 50 Marks (Total marks) = 10 Marks (Experiment) + 5 Marks (Assignments) + 30 Marks (Capstone Mini- Project with full prototype/ product demo, testing, validation and Report) + 5 Marks (Attendance).

#### Oral Exam: An Oral exam will be held based on the Capstone Mini-Project.

#### Letter Grades and Grade Points:

| Semester GPA/ Programme  | % of Marks    | Alpha-Sign/         | Grading |
|--------------------------|---------------|---------------------|---------|
| CGPA Semester/ Programme |               | Letter Grade Result | Point   |
| 9.00 - 10.00             | 90.0 - 100    | O (Outstanding)     | 10      |
| 8.00 - < 9.00            | 80.0 - < 90.0 | A+ (Excellent)      | 9       |
| 7.00 - < 8.00            | 70.0 - < 80.0 | A (Very Good)       | 8       |
| 6.00 - < 7.00            | 60.0 - < 70.0 | B+ (Good)           | 7       |
| 5.50 - < 6.00            | 55.0 - < 60.0 | B (Above            | 6       |
|                          |               | Average)            |         |
| 5.00 - < 5.50            | 50.0 - < 55.0 | C (Average)         | 5       |
| 4.00 - < 5.00            | 40.0 - < 50.0 | P (Pass)            | 4       |
| Below 4.00               | Below 40.0    | F (Fail)            | 0       |
| Ab (Absent)              | -             | Ab (Absent)         | 0       |
